THE EVOLUTION OF ENGINEERING TEAMS

Why Engineering Never Seems To Build "The Right Thing"

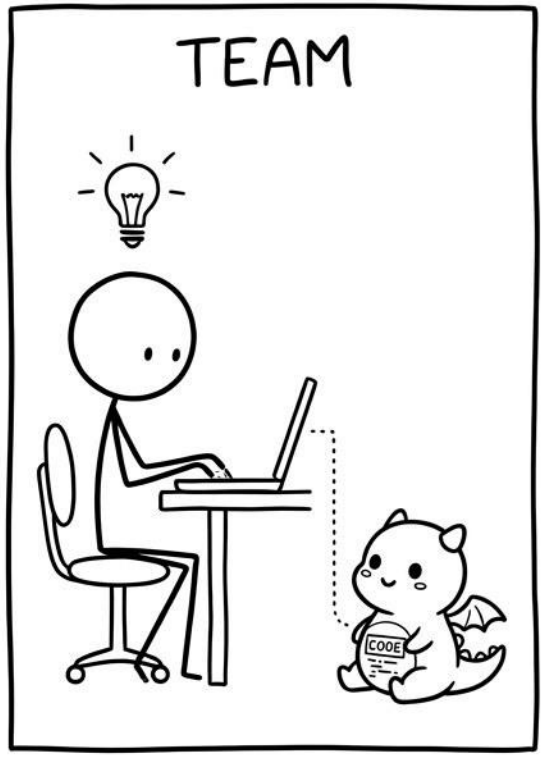

A Systems Explanation of Why It's So Damn Hard

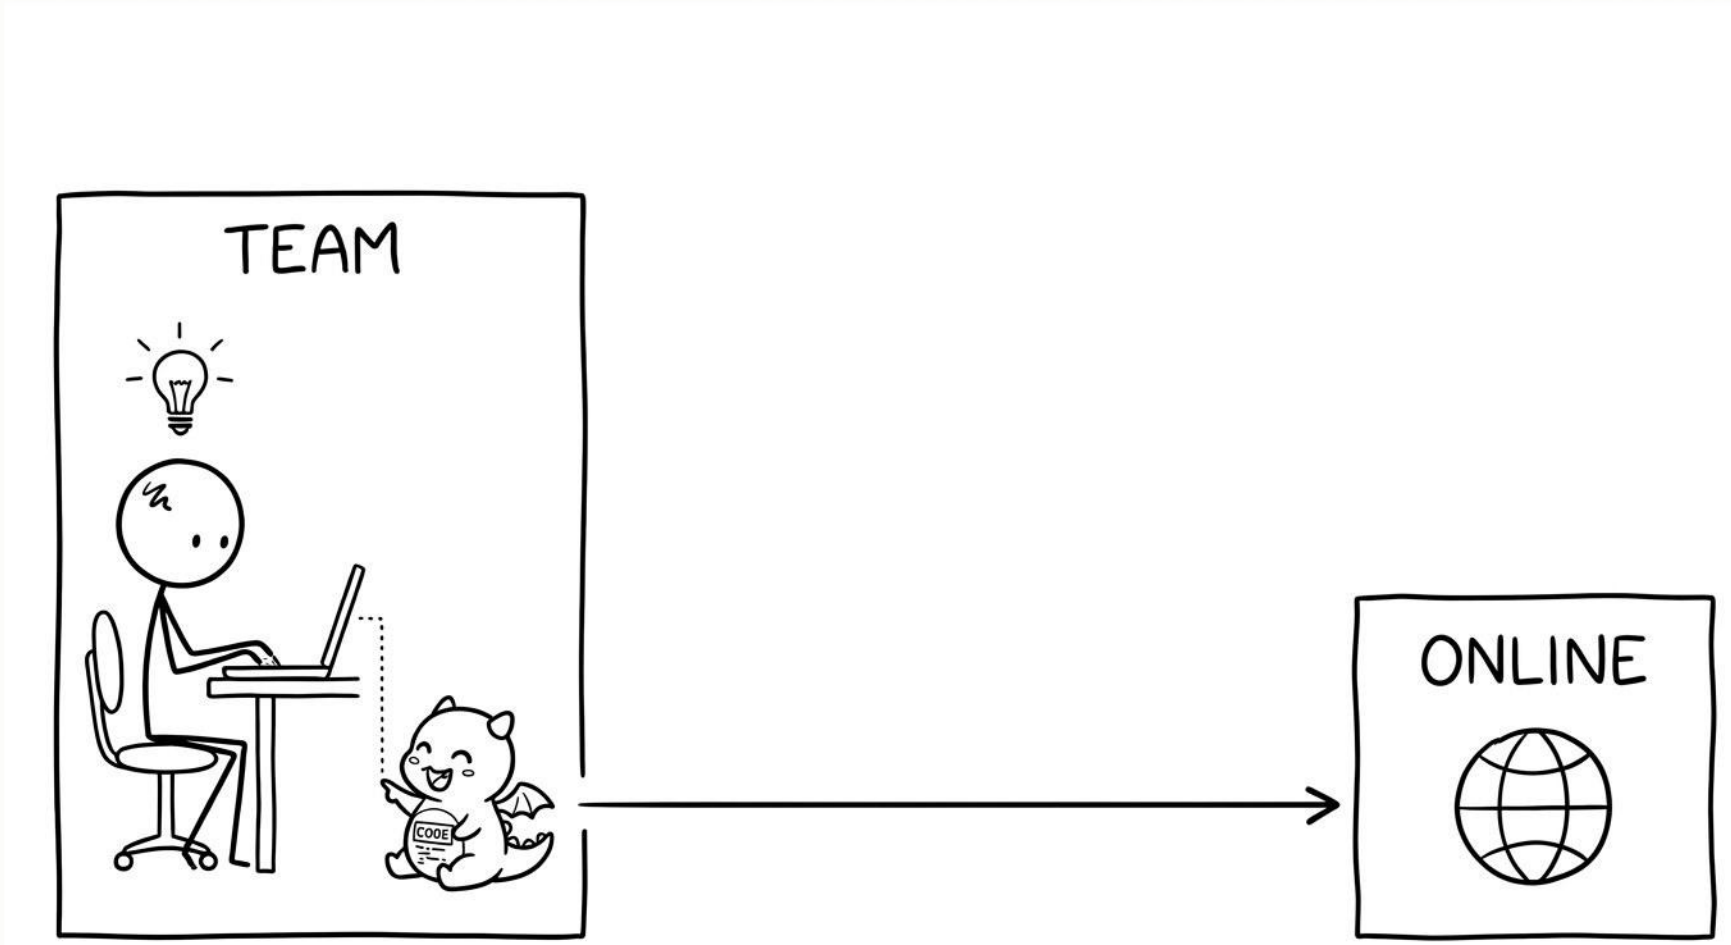

A field guide for non-engineers and new managers, in stick figures.

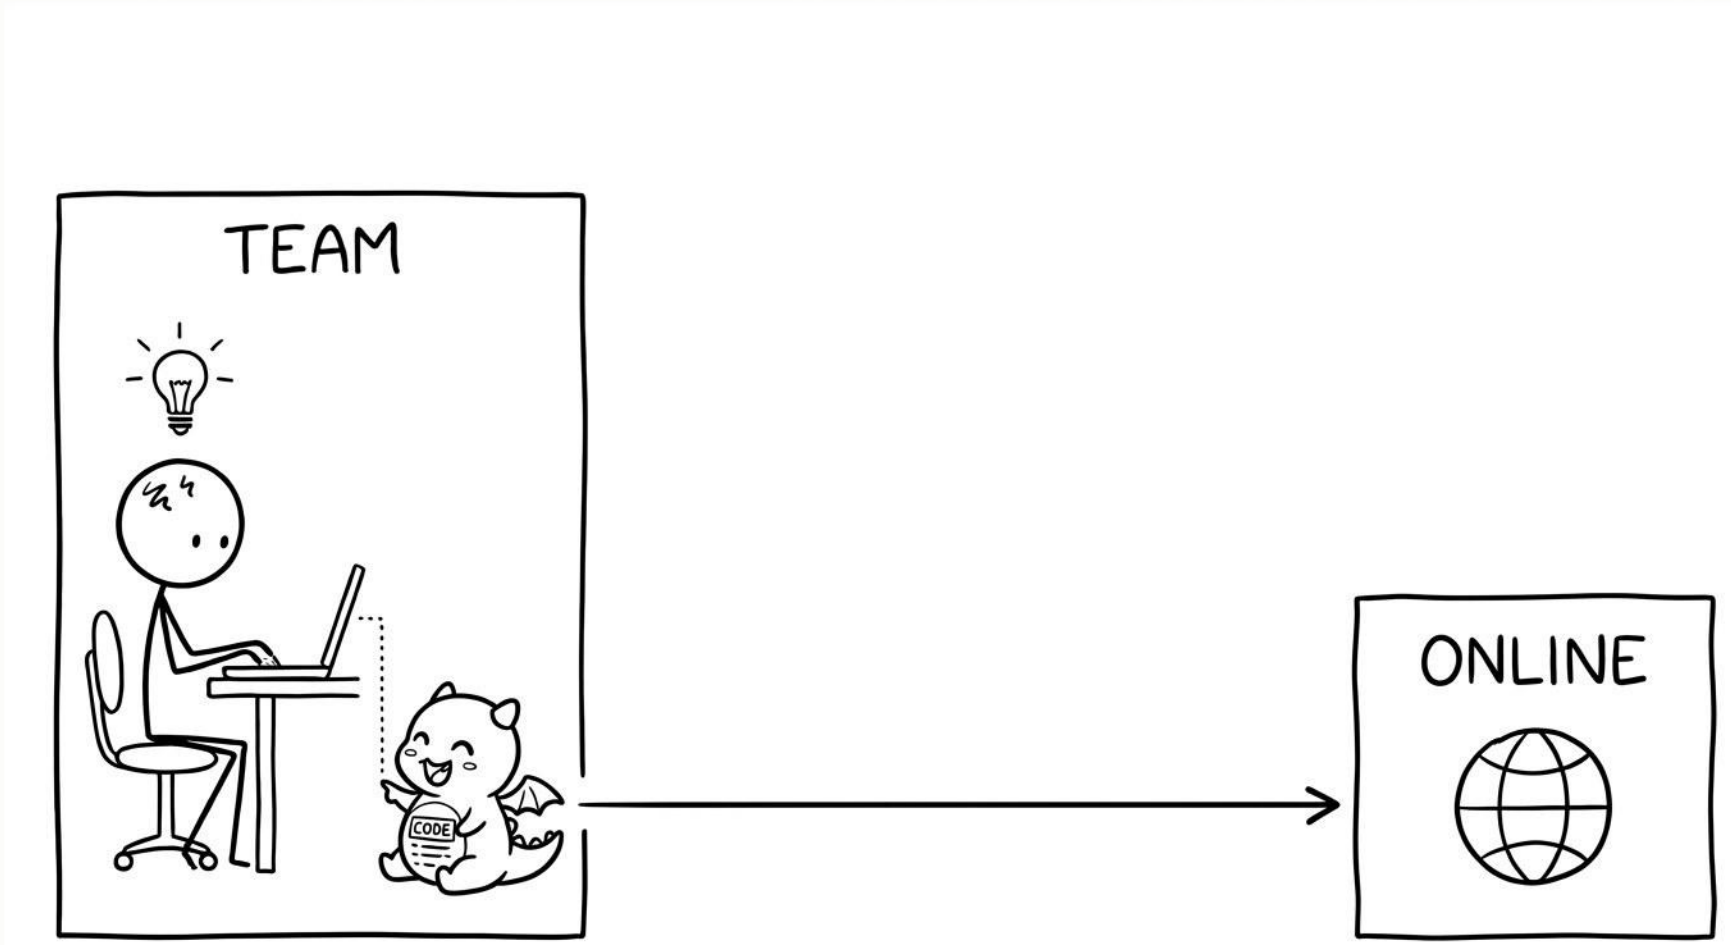

PART 1

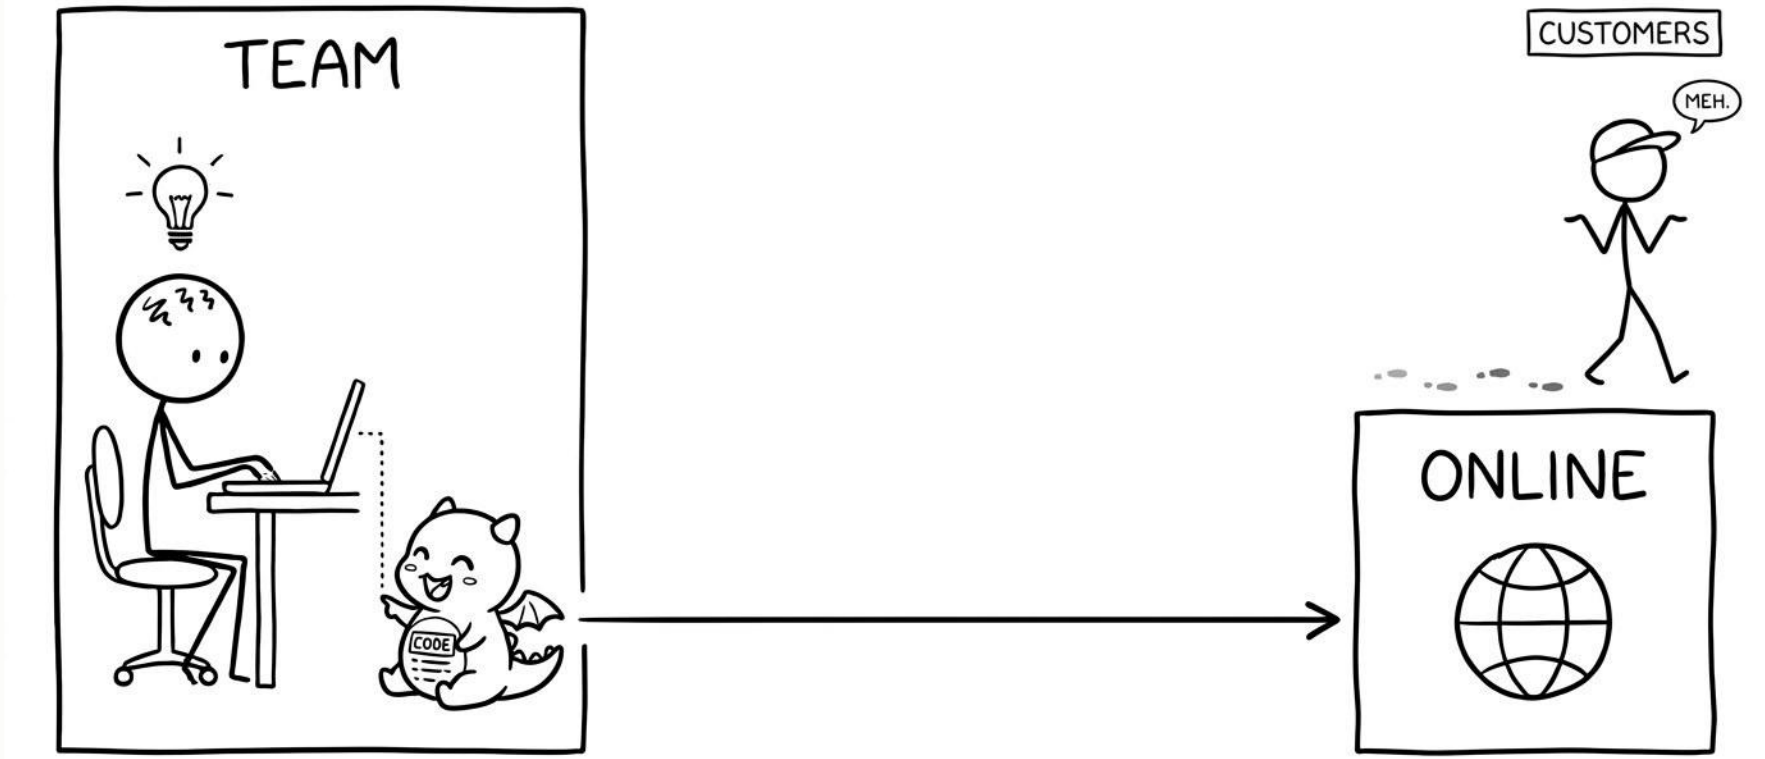

How an Engineering Org Grows

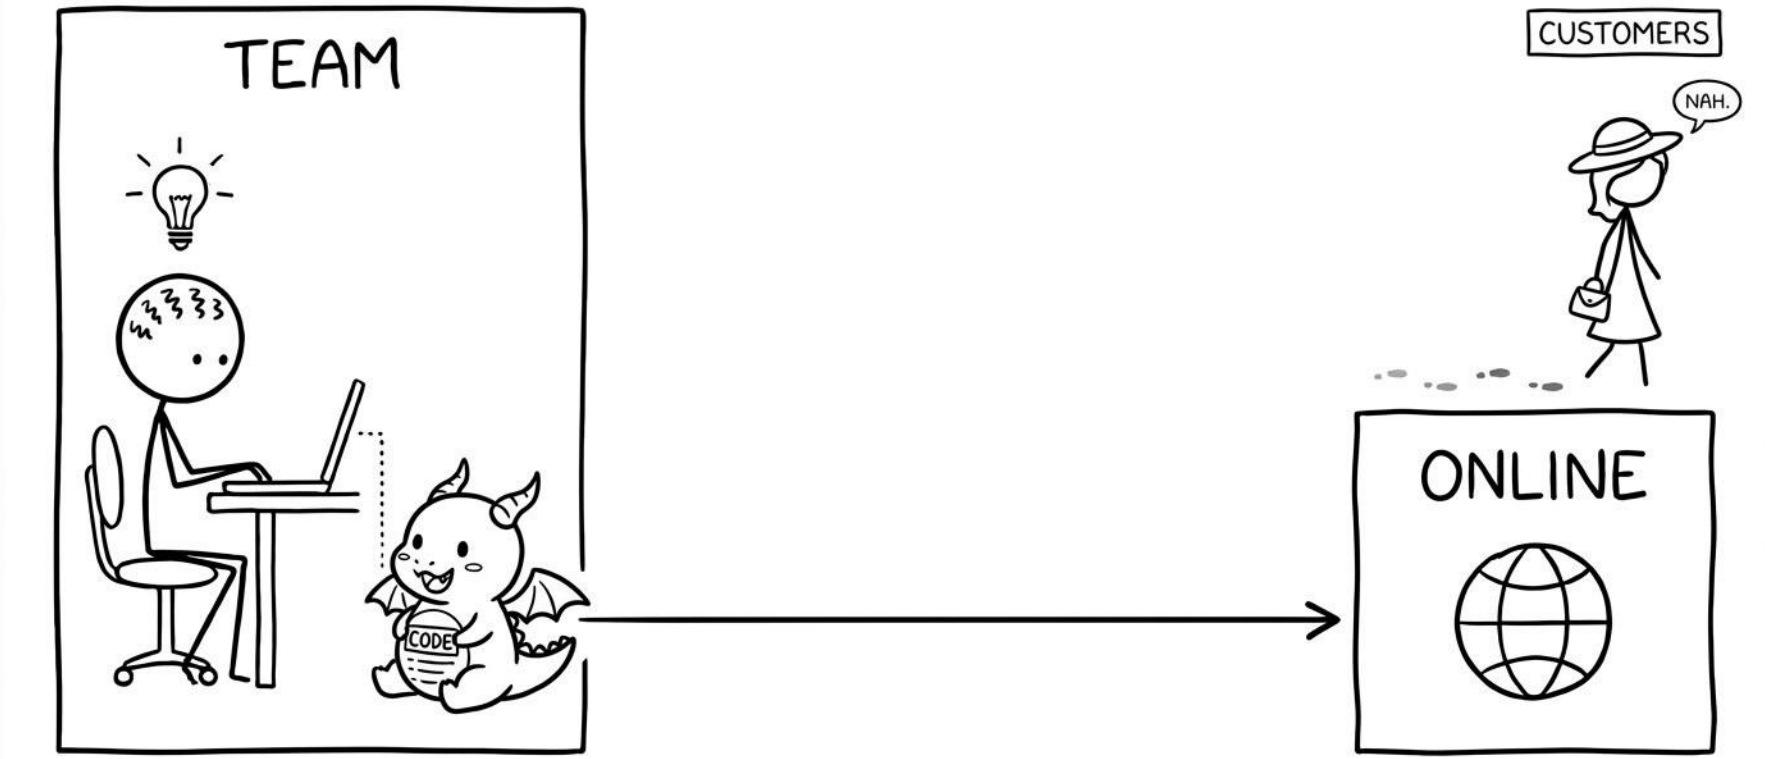

From one engineer to a whole org, one sensible step at a time

OH, AND DON'T FORGET...

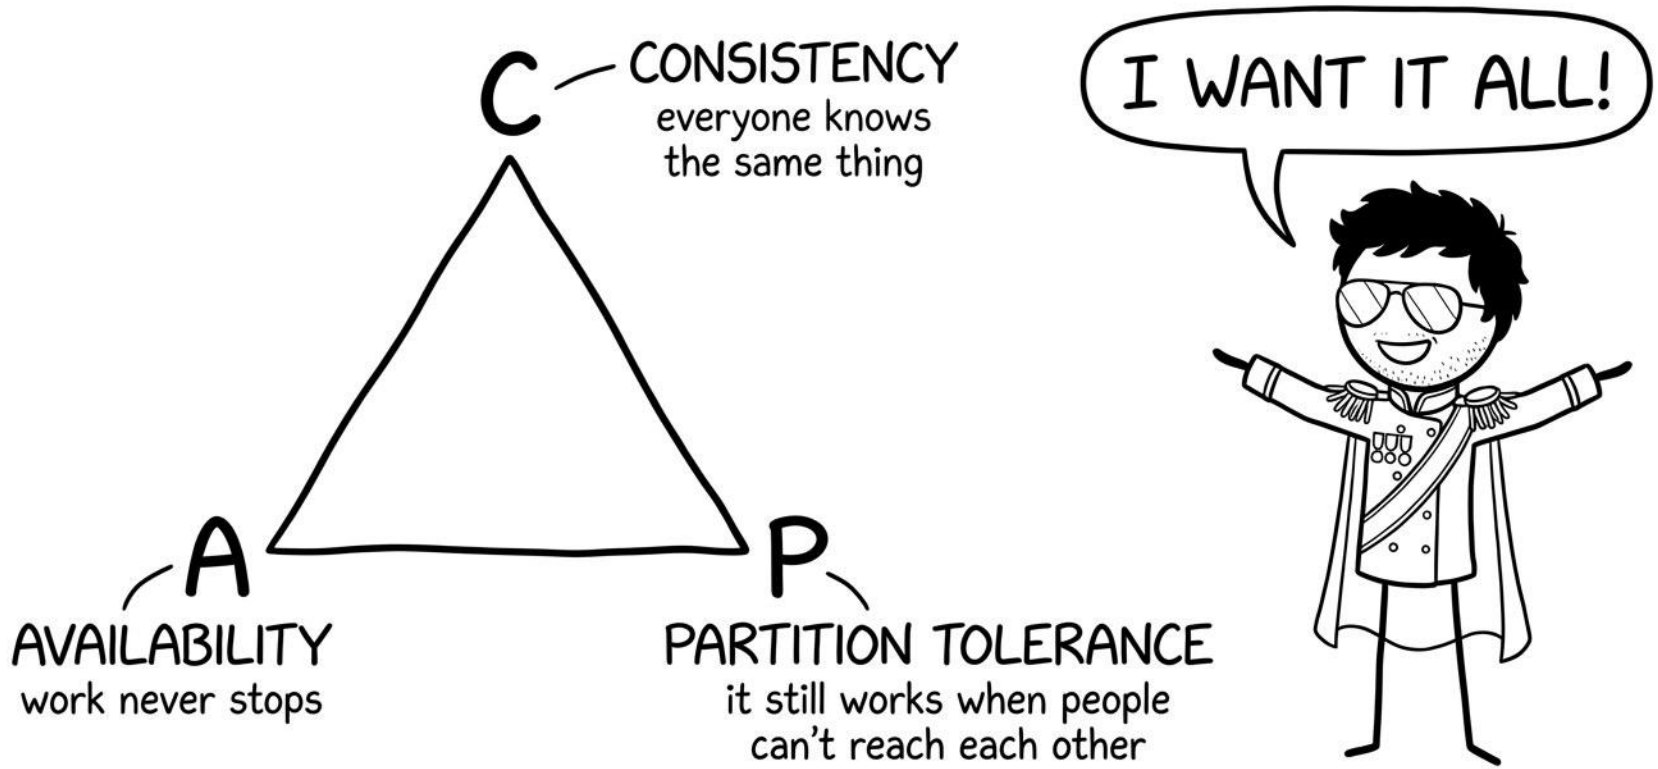

PART 2

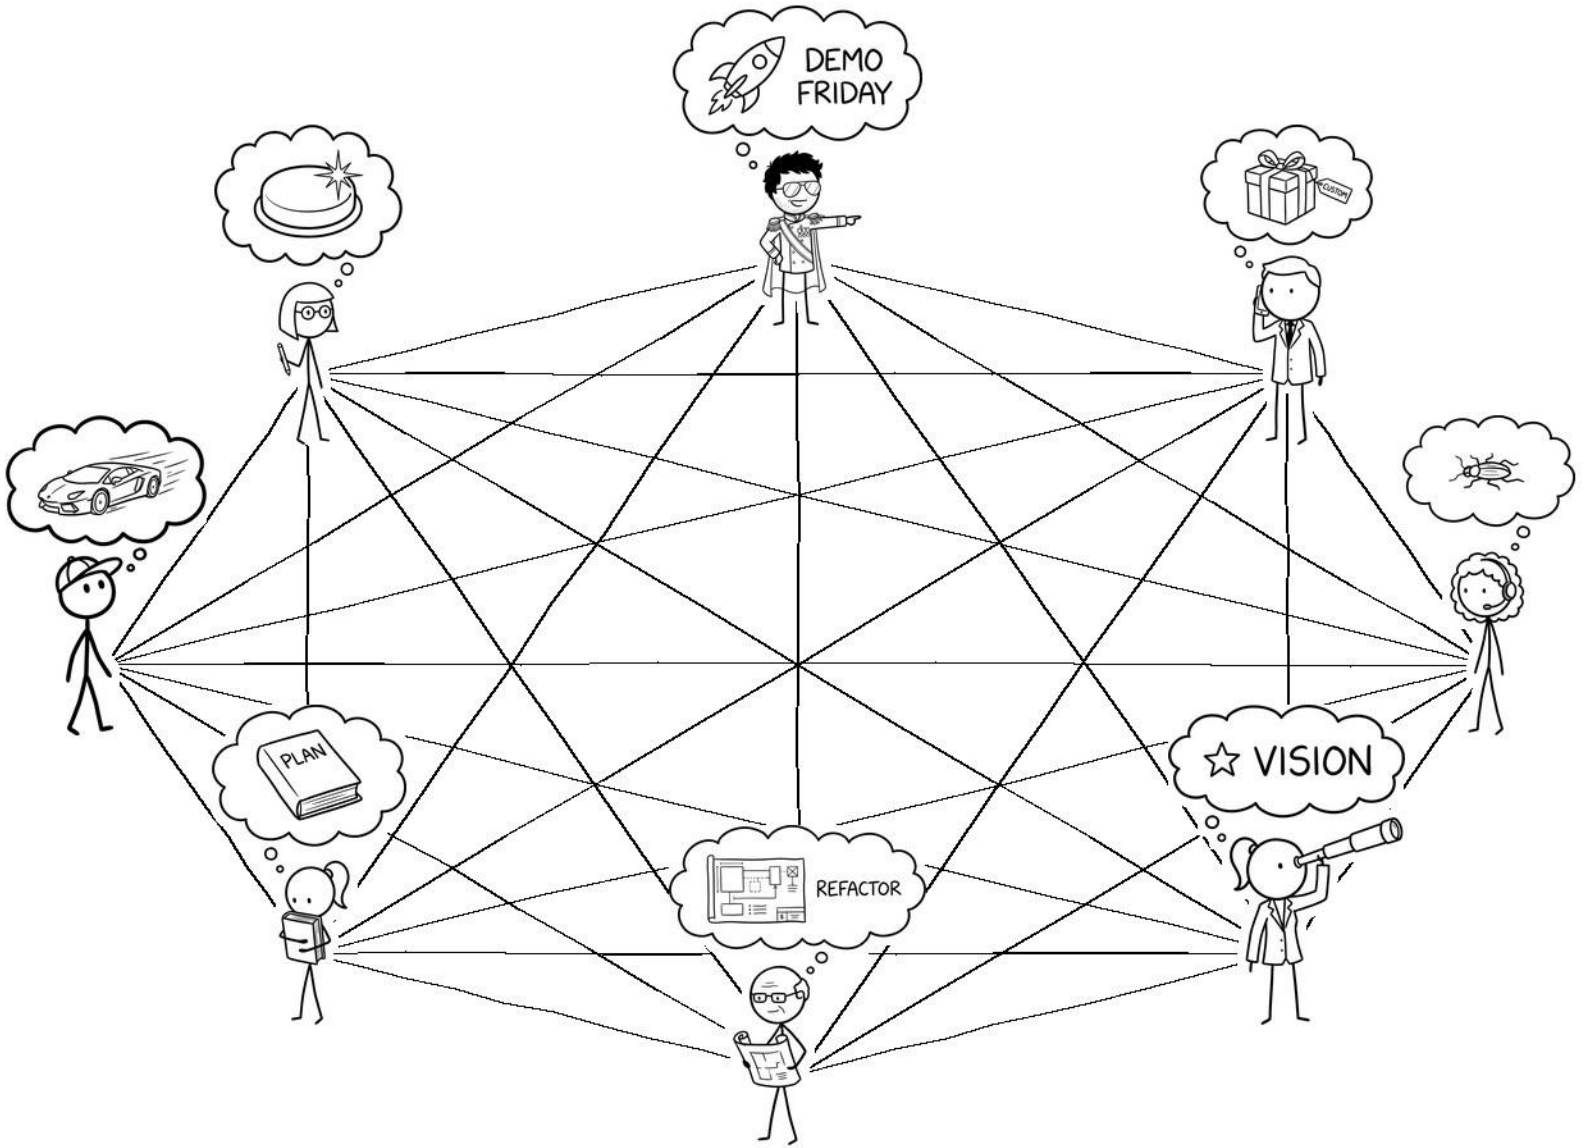

Why It's So Hard

Everyone's signal is different, and that can't be avoided

THE CAP THEOREM

CONSISTENCY: everyone knows the same thing

Every line is a conversation that has to happen.

2 people = 1 line

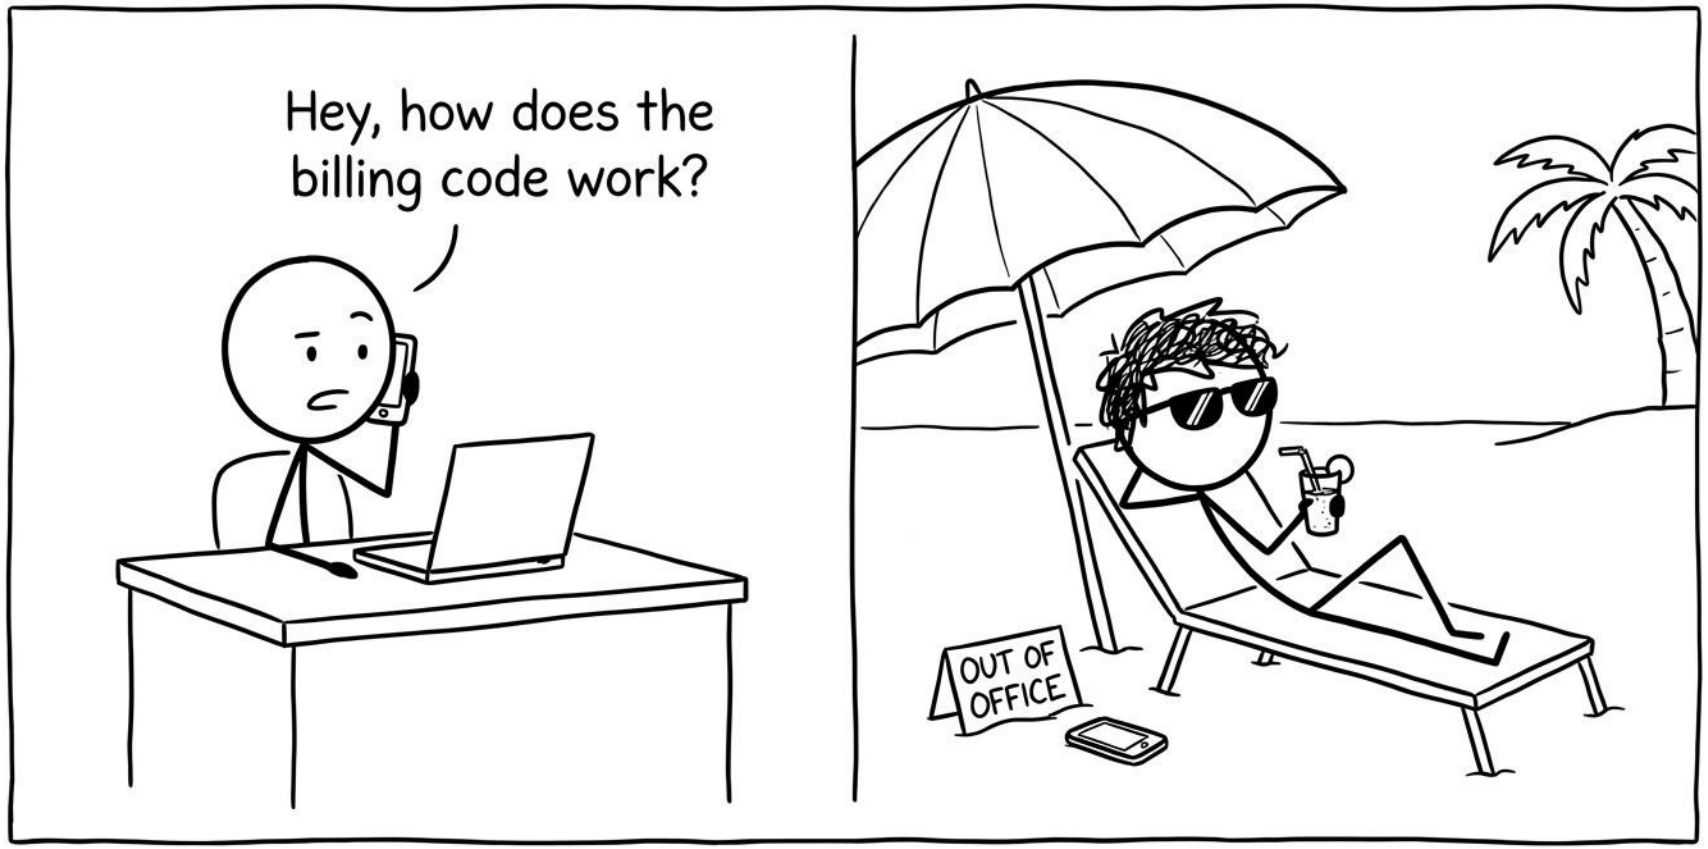

4 people = 6 lines

8 people = 28 lines

50 people = 1,225 lines

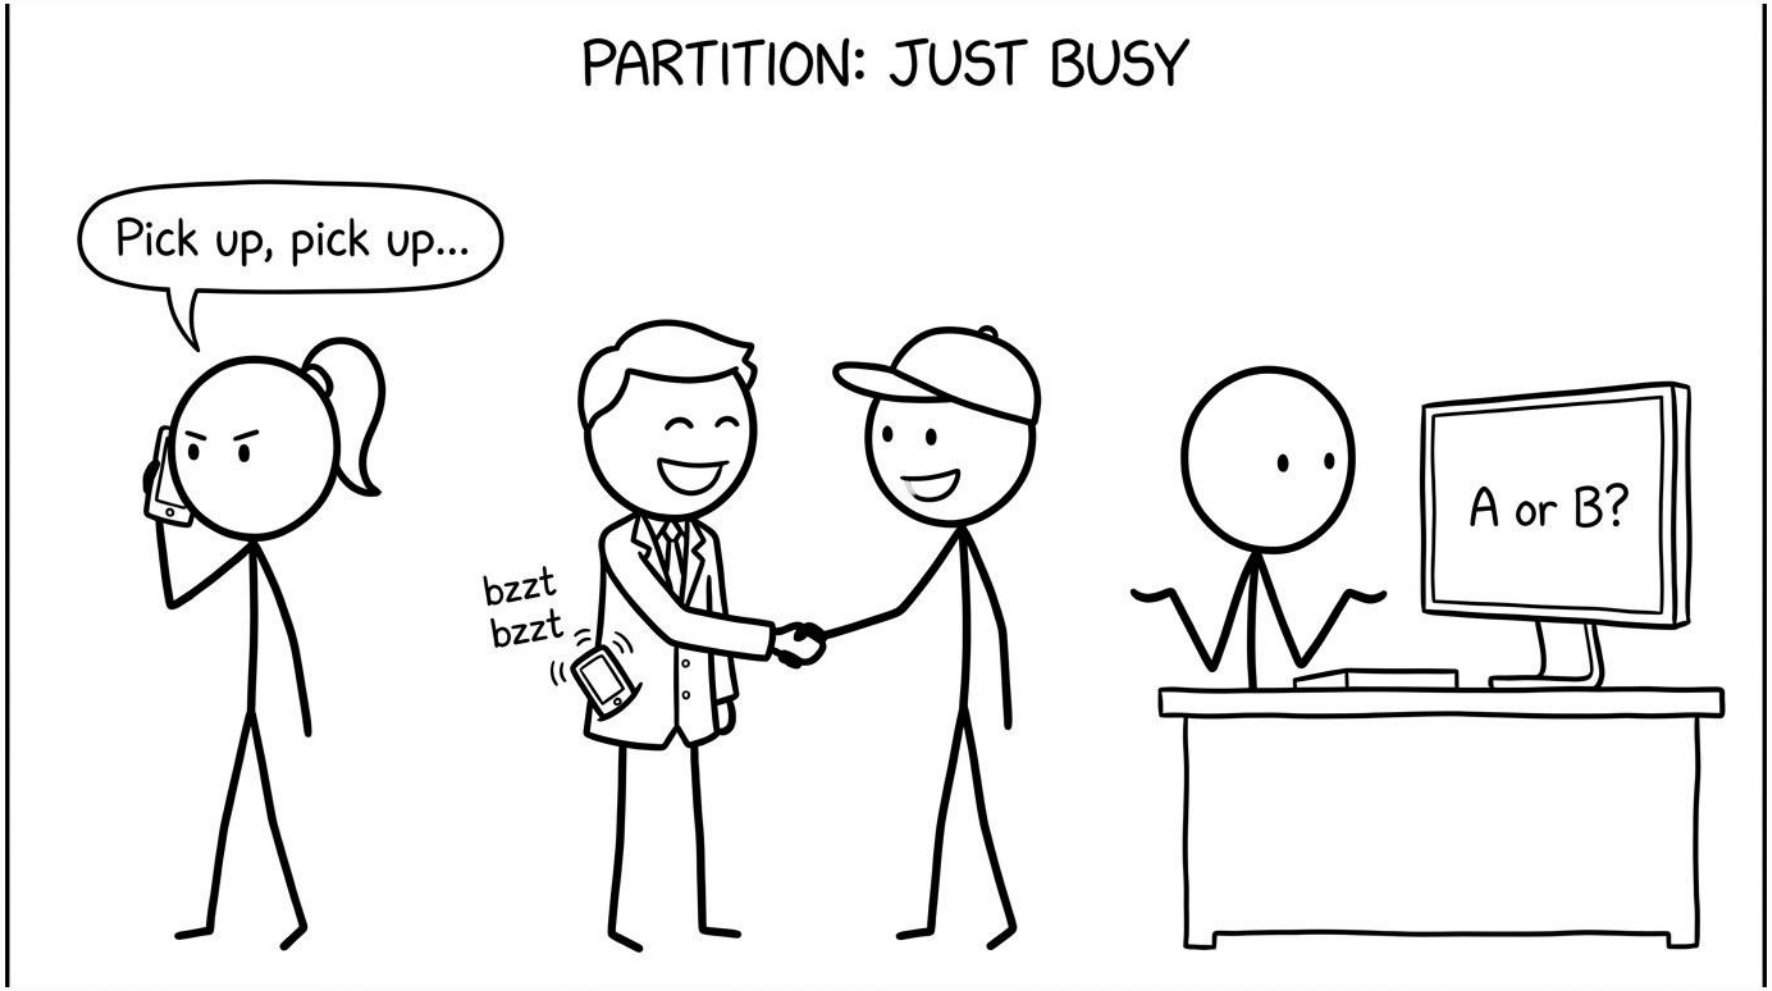

...and they all want something different.

PARTITION: ON VACATION

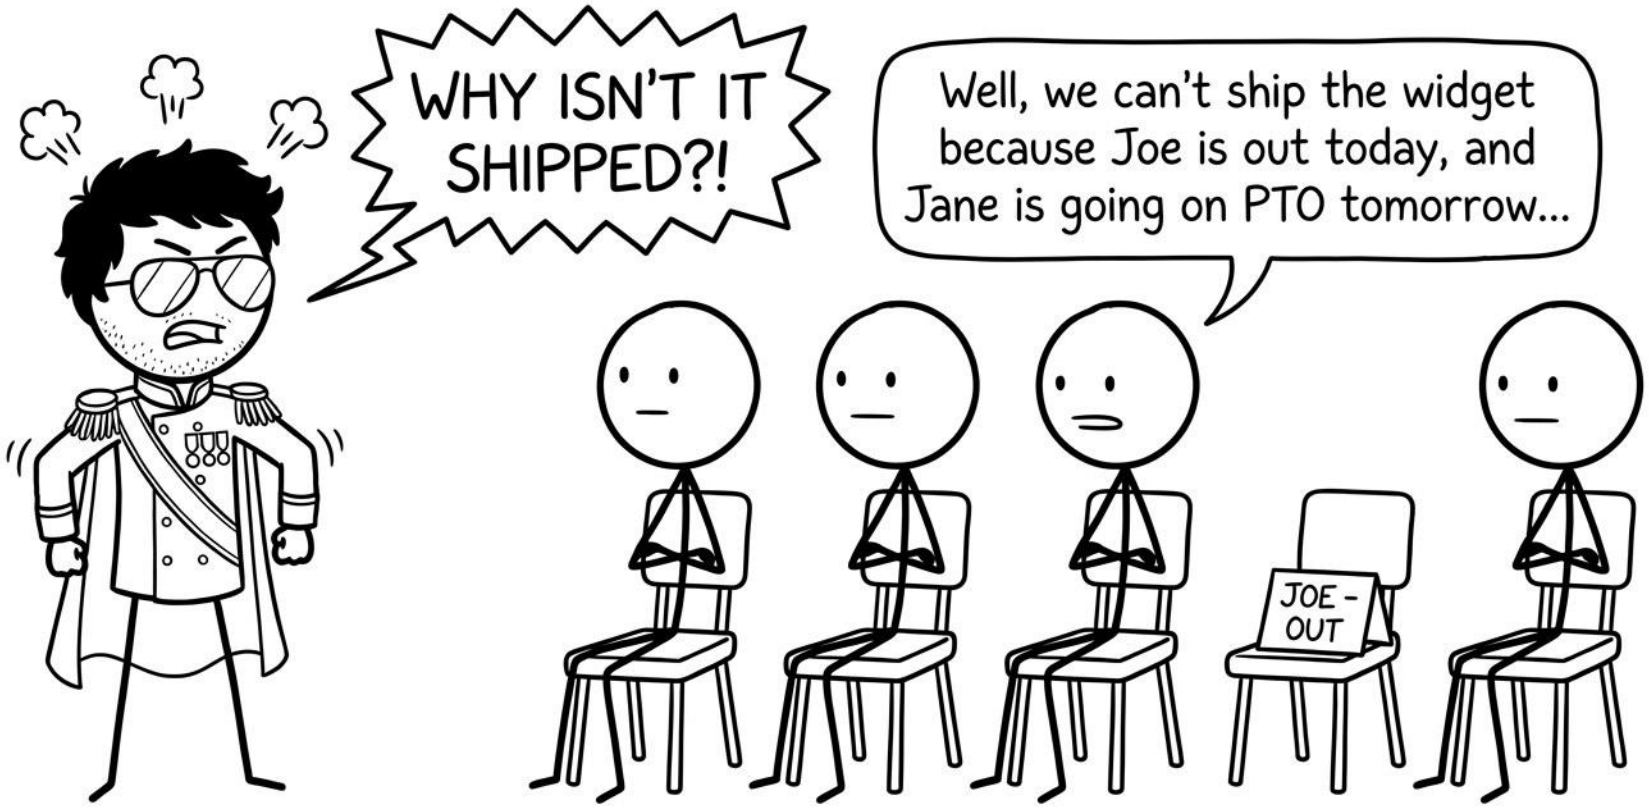

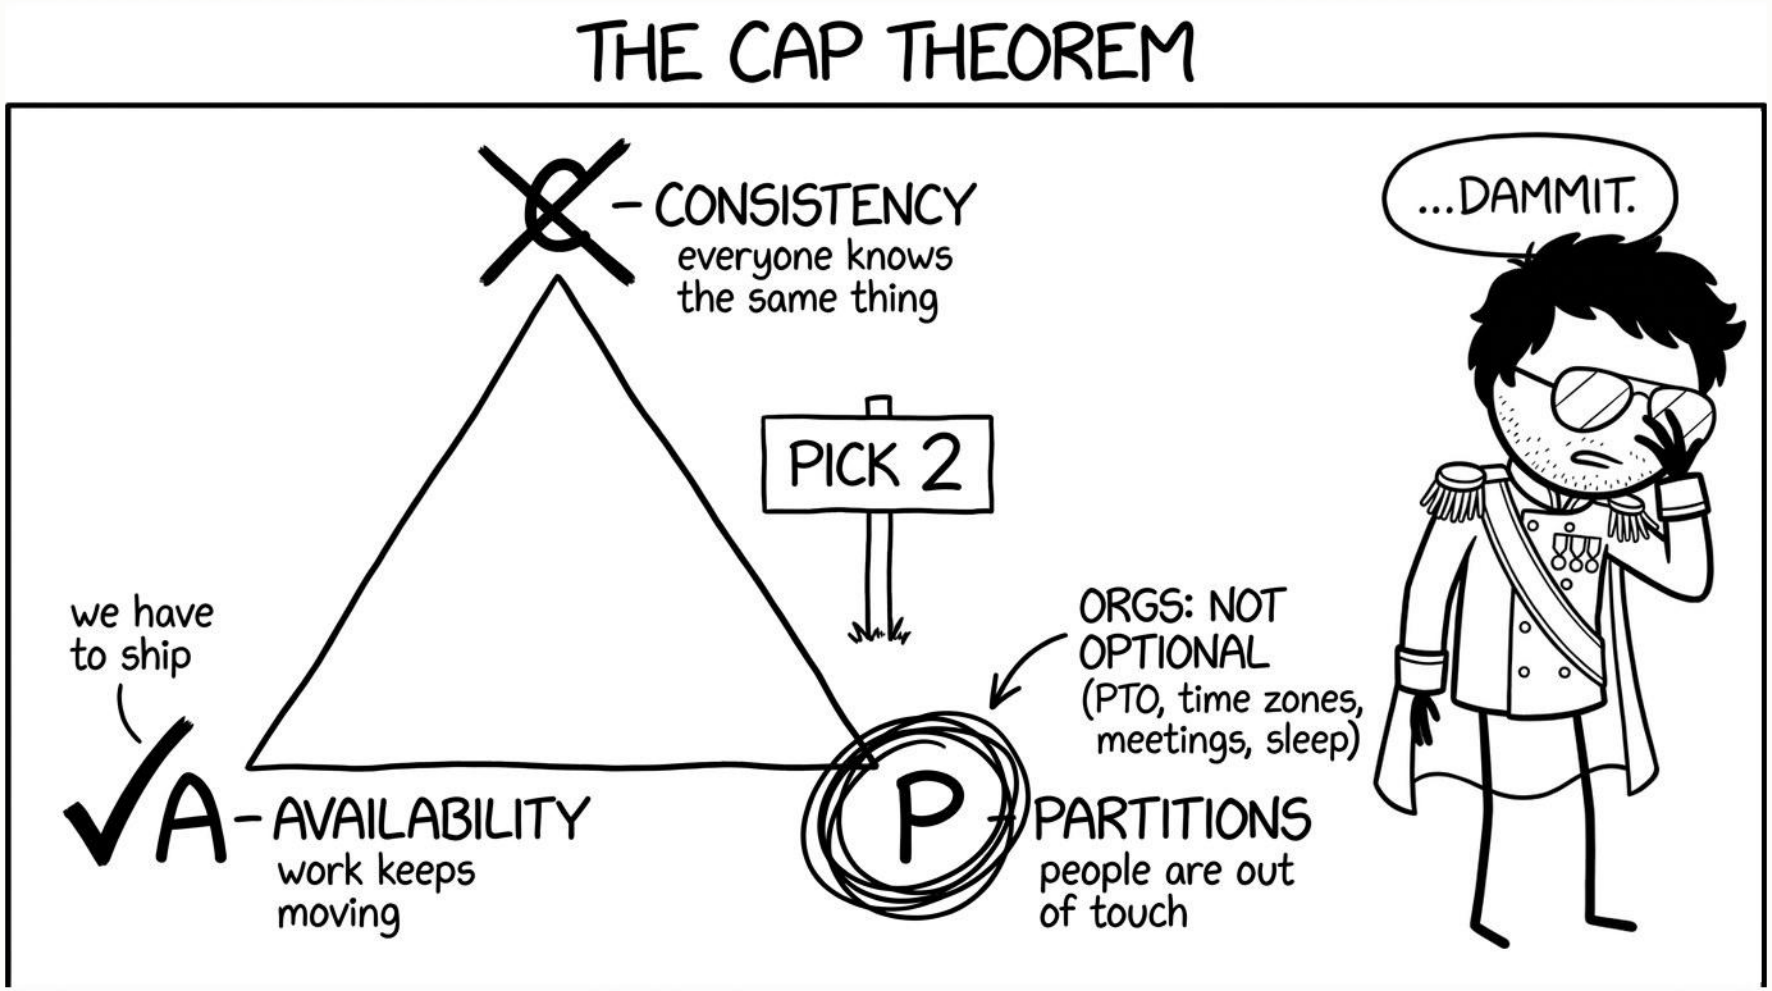

PARTITION: GONE FOR GOOD

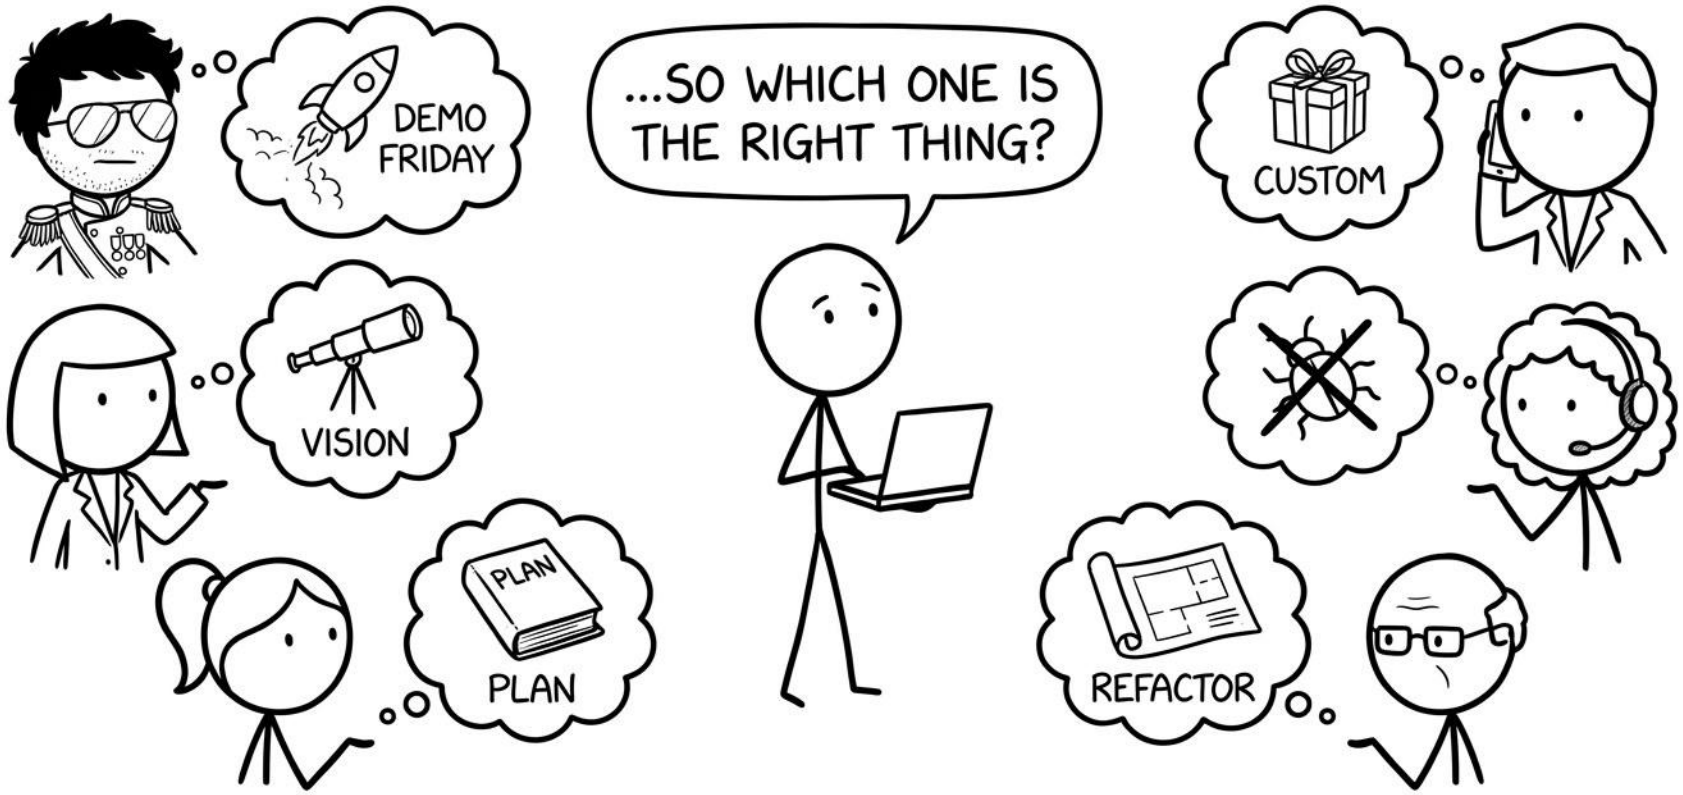

PARTITION: JUST BUSY
Pick up, pick up...
bzzt
bzzt
A or B?

AVAILABILITY: WORK NEVER STOPS... RIGHT?

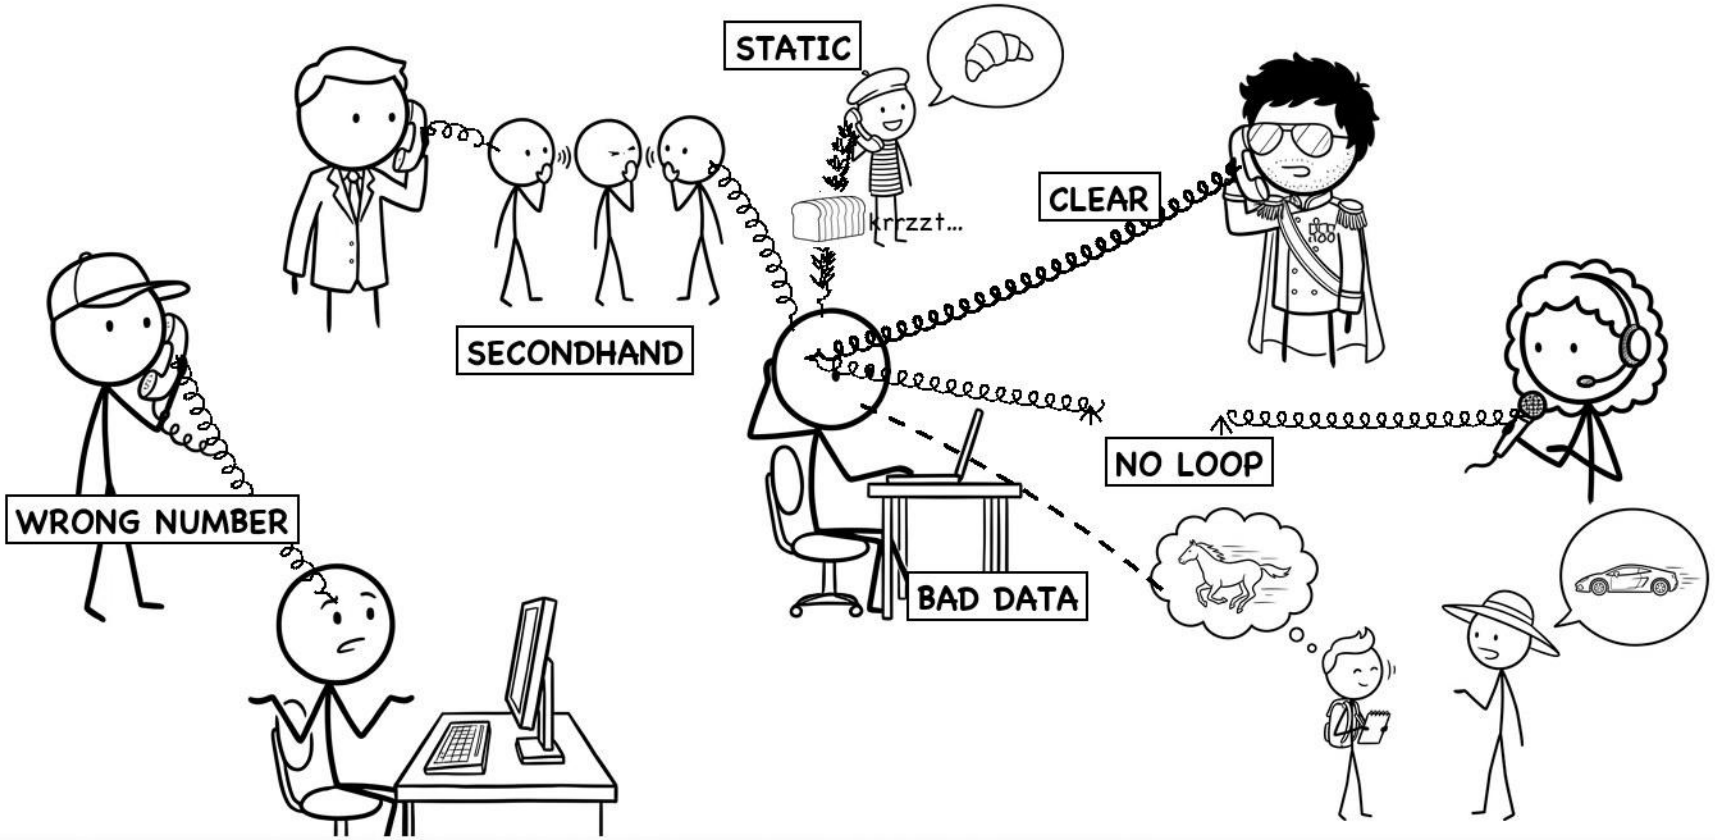

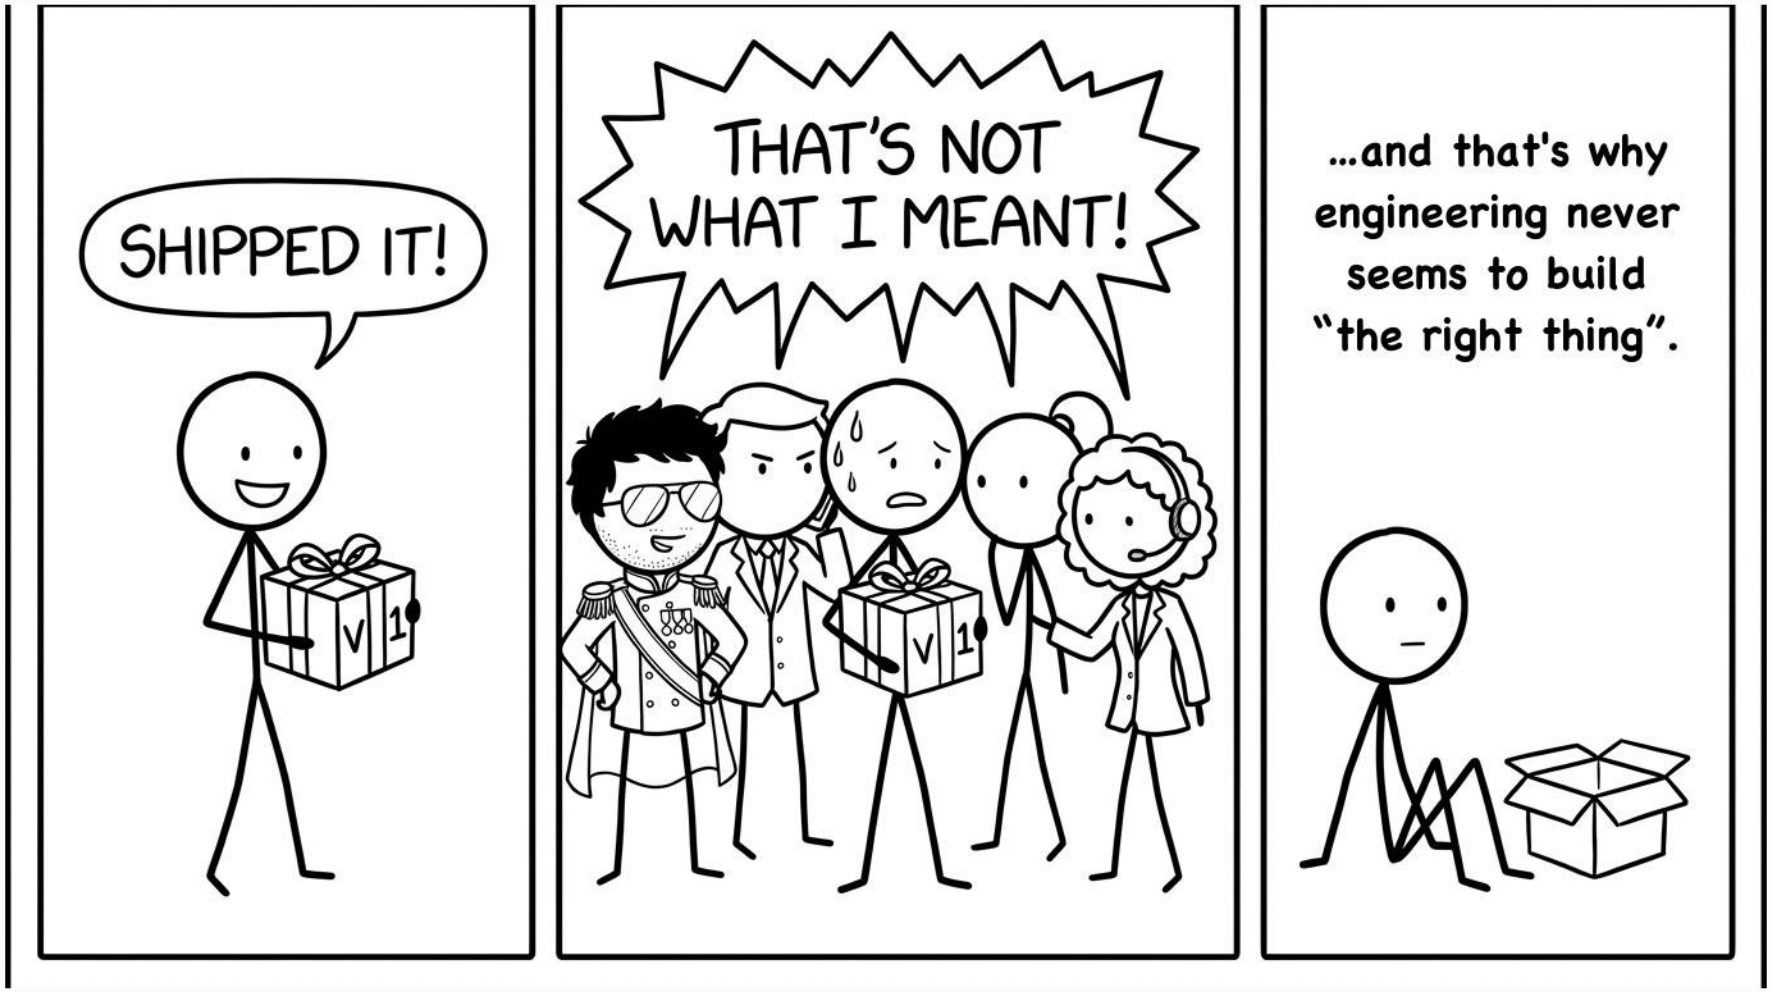

THE CAP THEOREM
C - CONSISTENCY
everyone knows the same thing
PICK 2
we have to ship
A - AVAILABILITY
work keeps moving
P - PARTITIONS
people are out of touch
ORGS: NOT OPTIONAL
(PTO, time zones, meetings, sleep)
...DAMMIT.

Everyone has a different "right thing".

...and every signal arrives differently.

SHIPPED IT!
V 1
THAT'S NOT WHAT I MEANT!
V 1
...and that's why engineering never seems to build "the right thing".

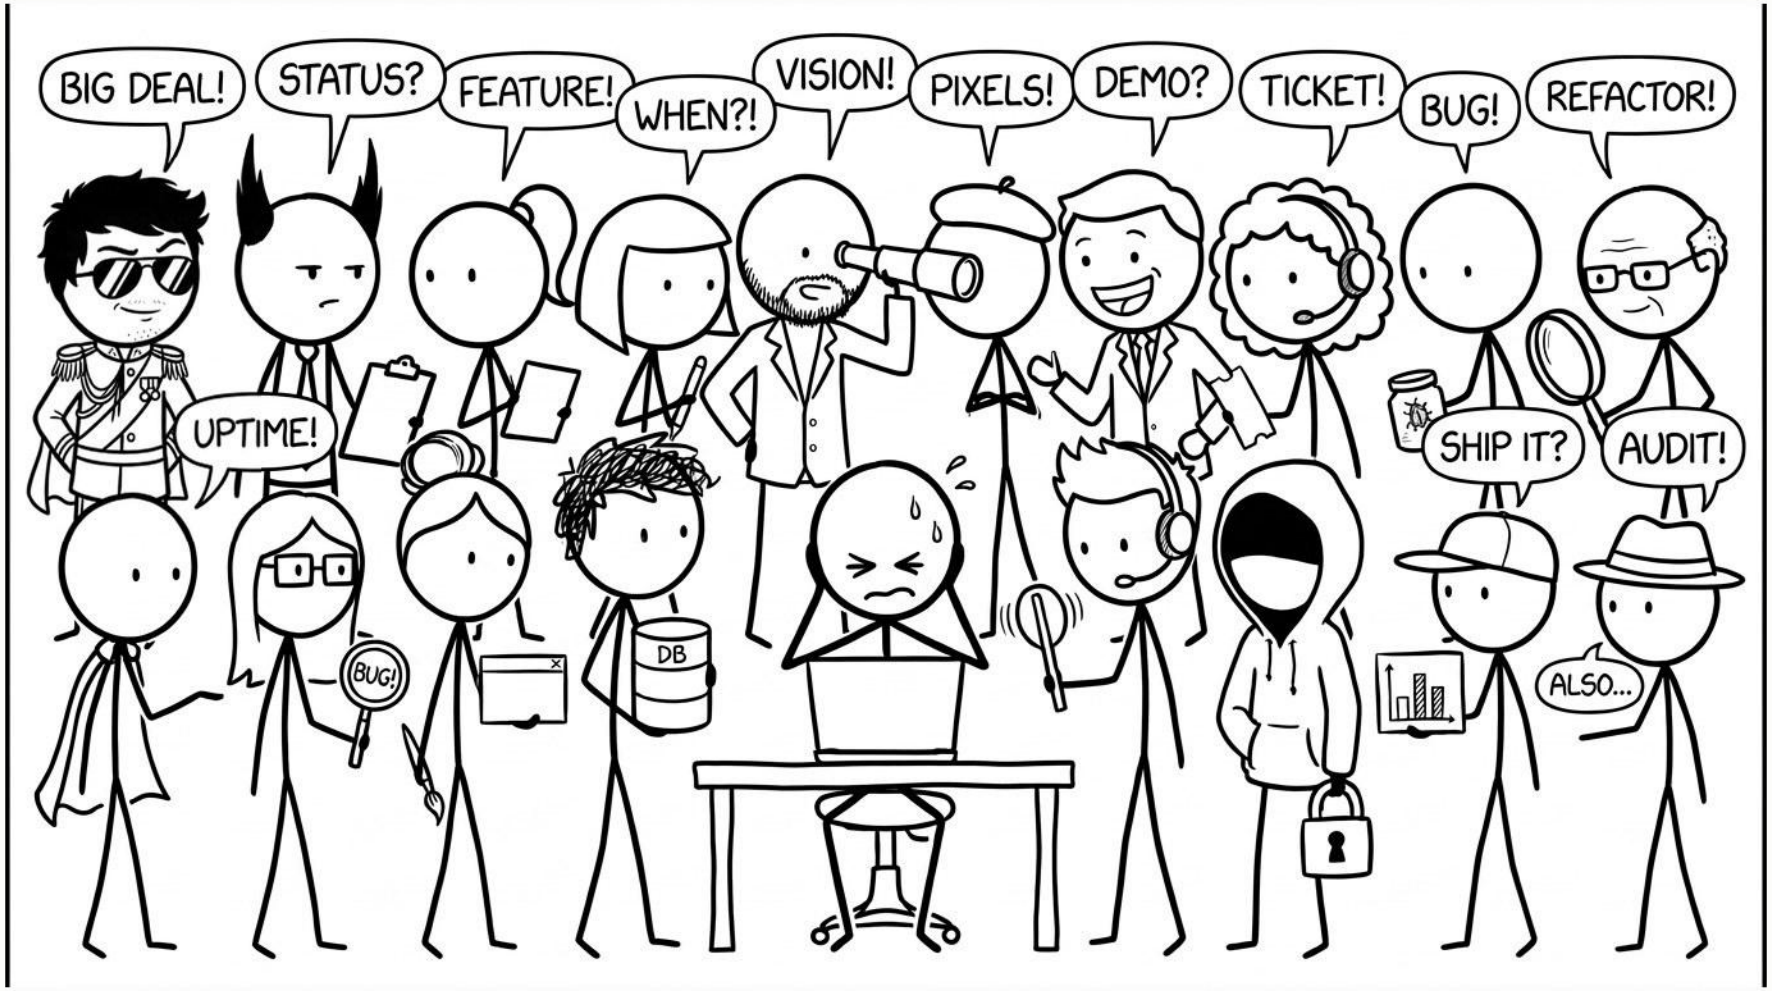

PART 3

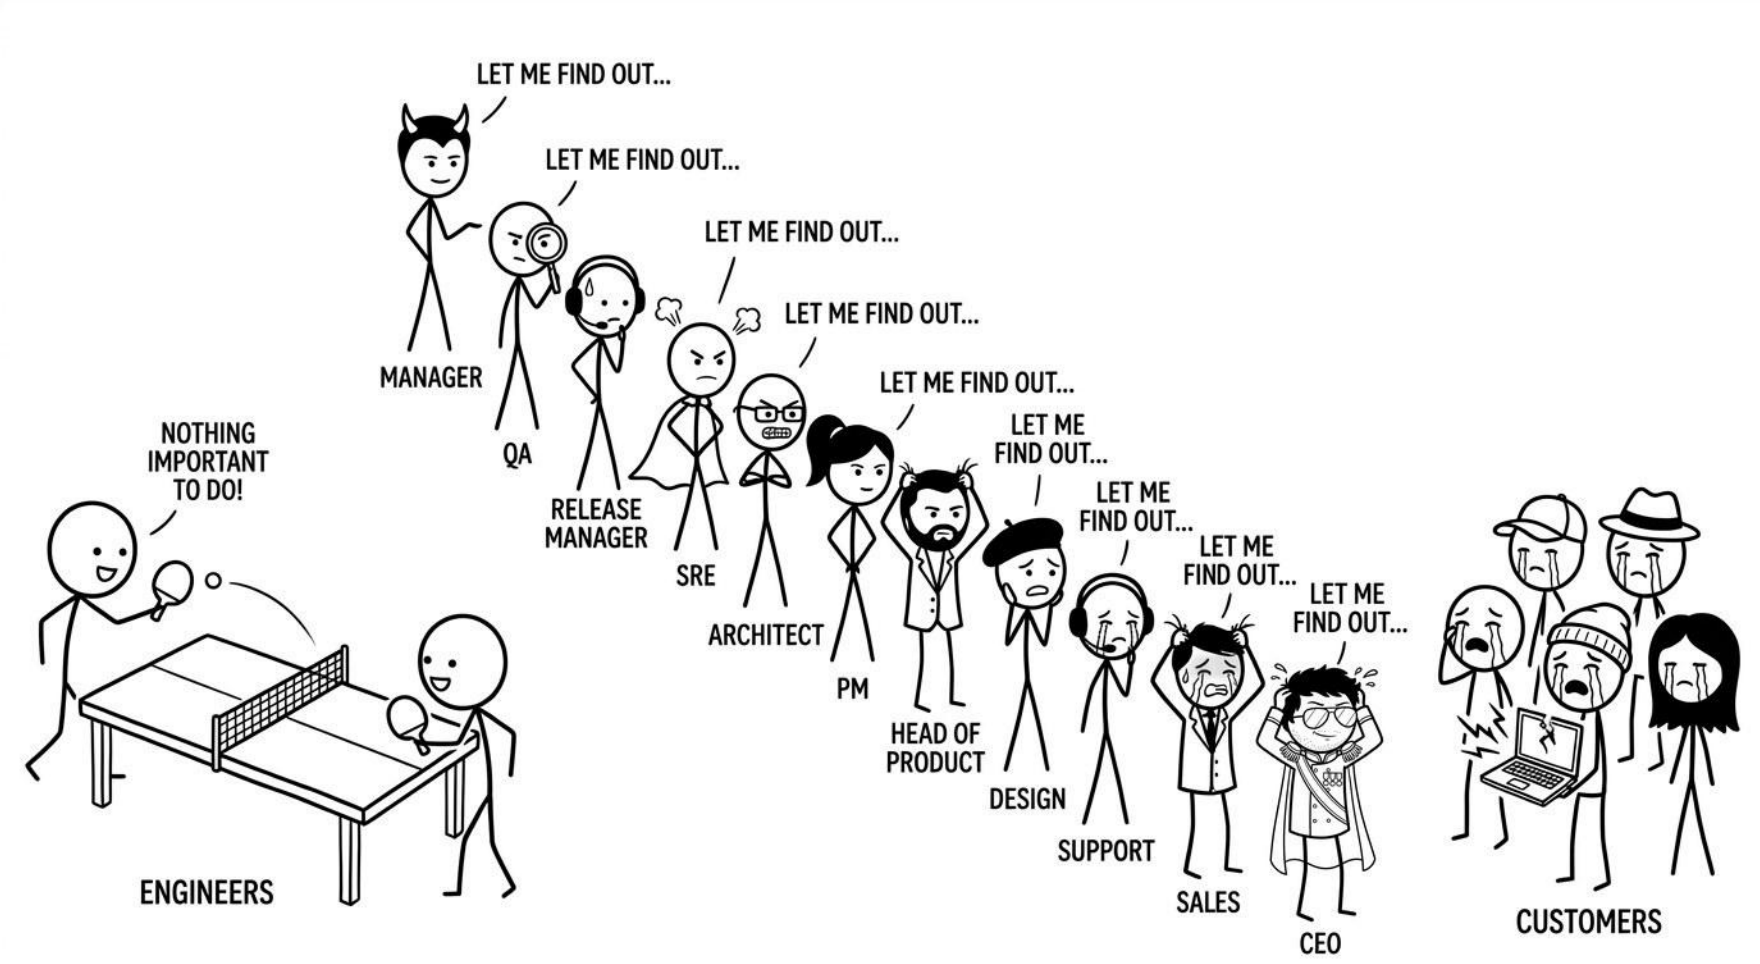

Common Org Failure Modes

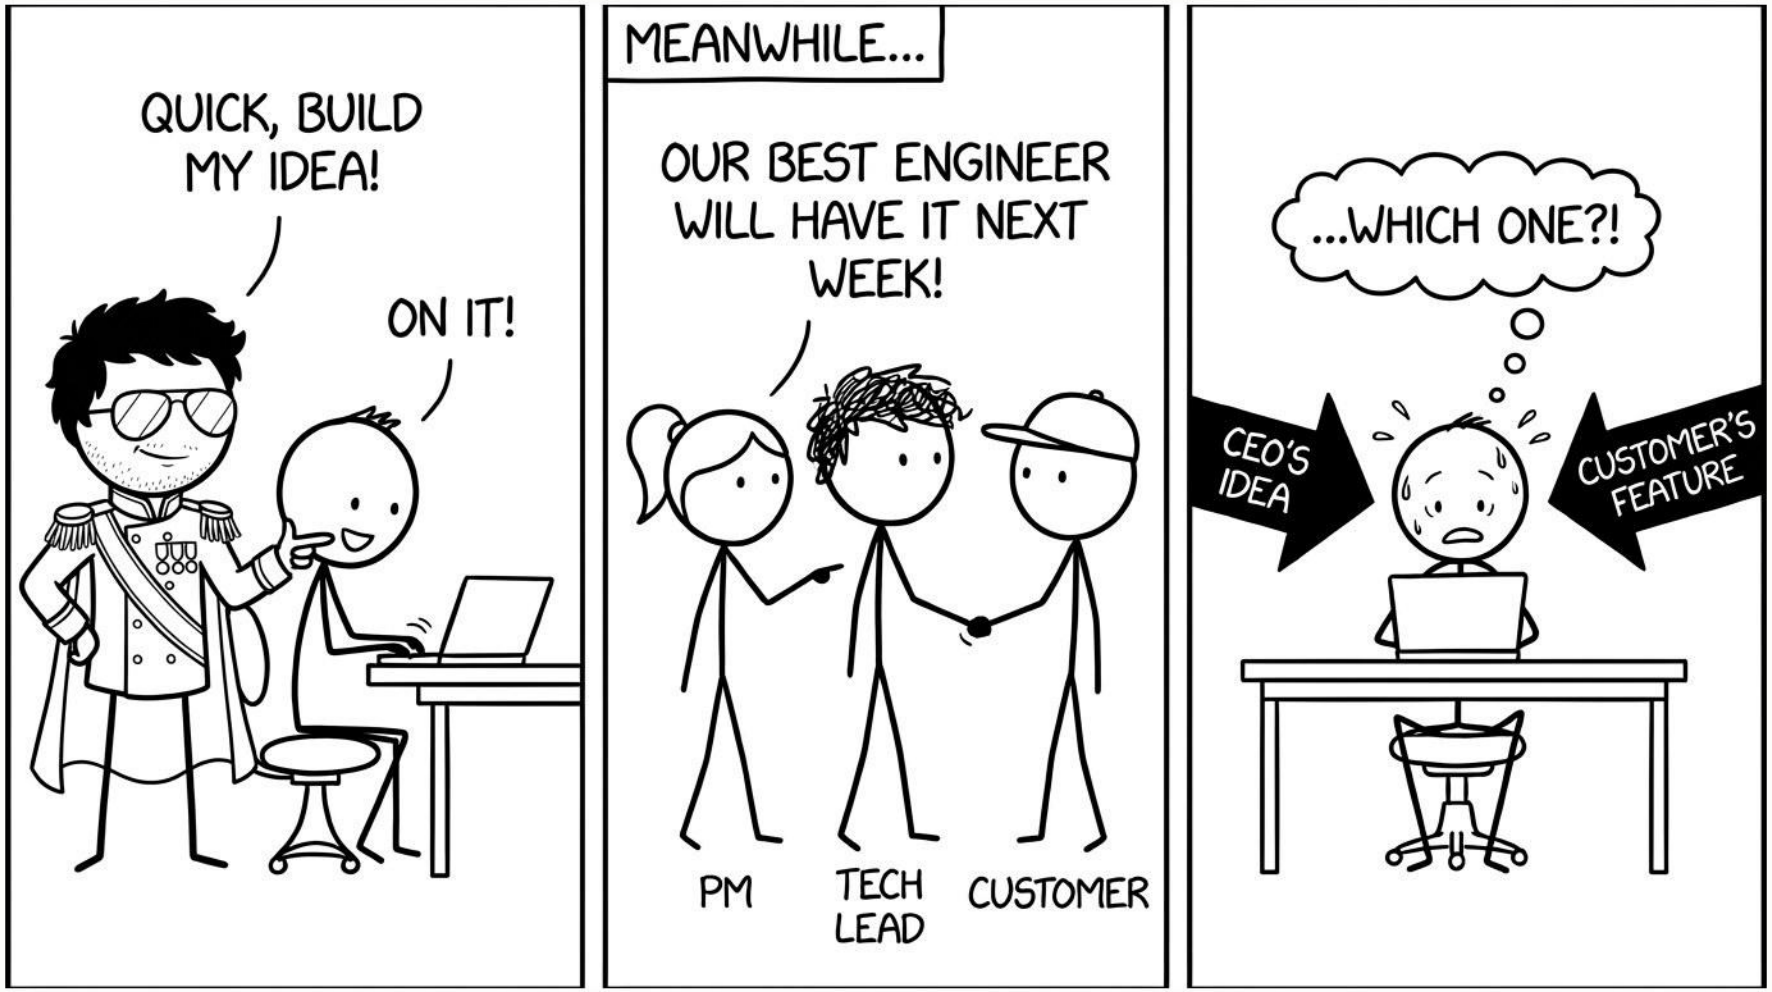

What it looks like when the org around engineering goes wrong

PART 4

Techniques for Solving This

YOUR ORG IS A DISTRIBUTED SYSTEM

8 people = 28 phone lines (N people ≈ N^2 lines)

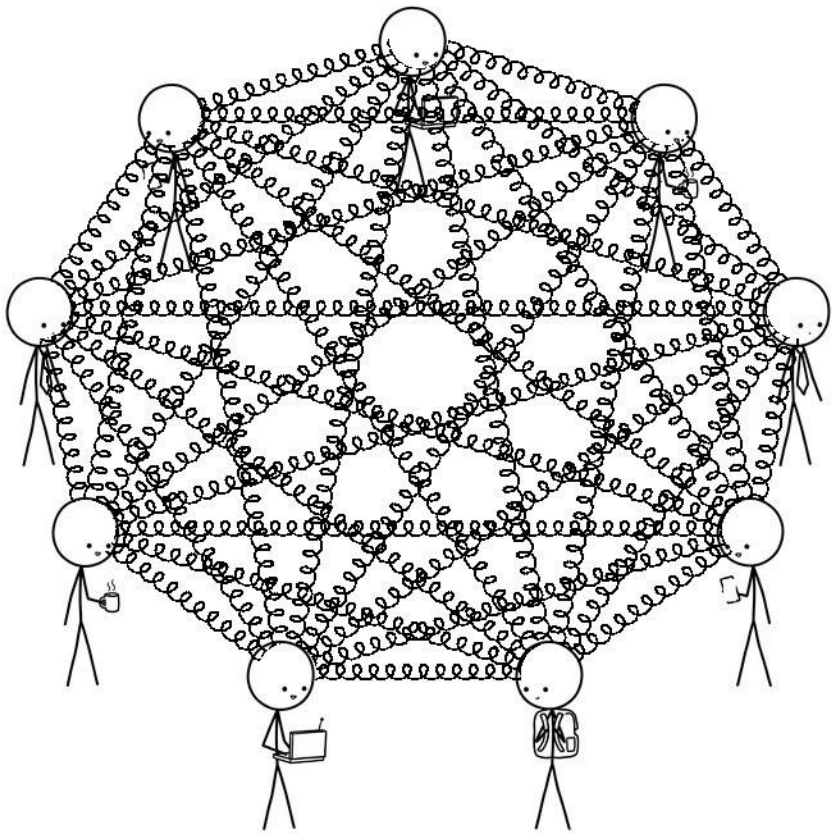

WHERE THE BRAINPOWER GOES

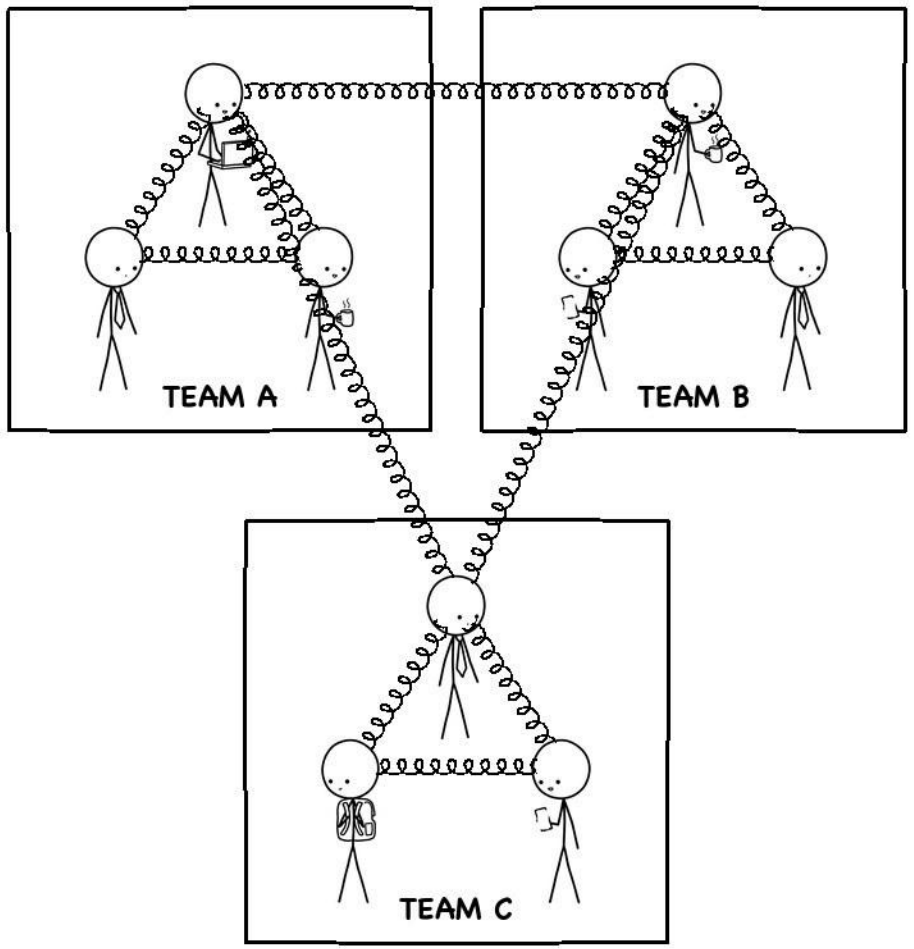

The job: just enough consistency,
without burning all the CPU on it.

SHARD IT: SMALL TEAMS, CLEAR OWNERS

Each team owns its own dragon, and teams talk through one interface.

1 team of 9: 36 phone lines

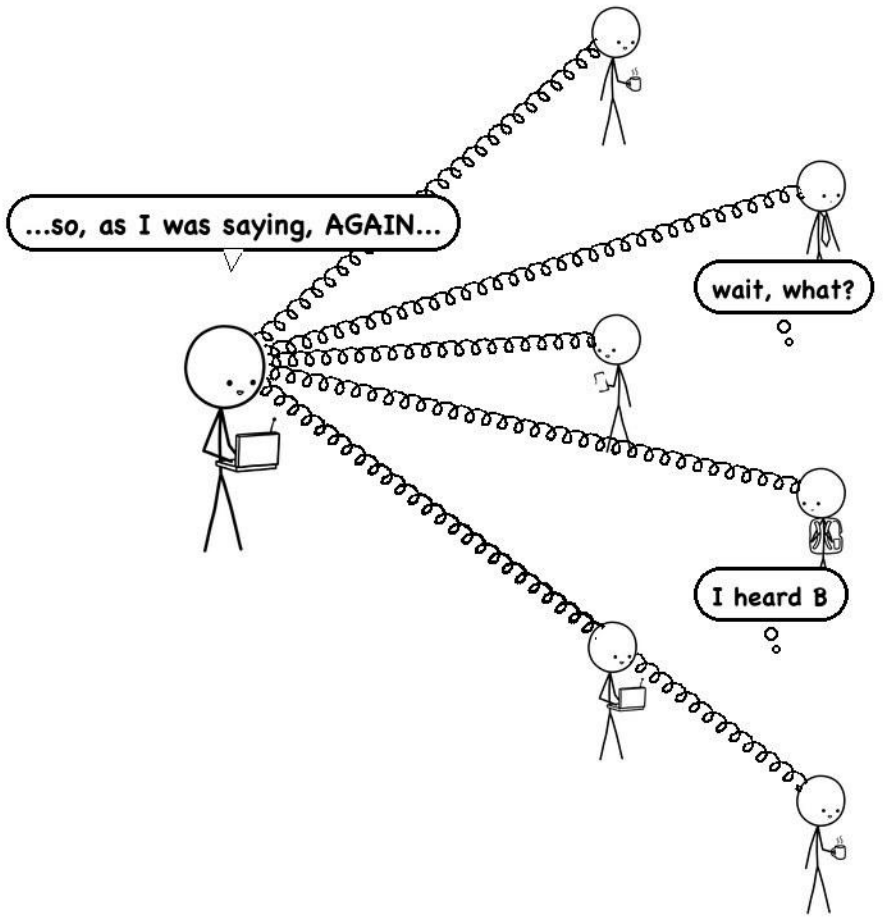

3 teams of 3: 12 phone lines

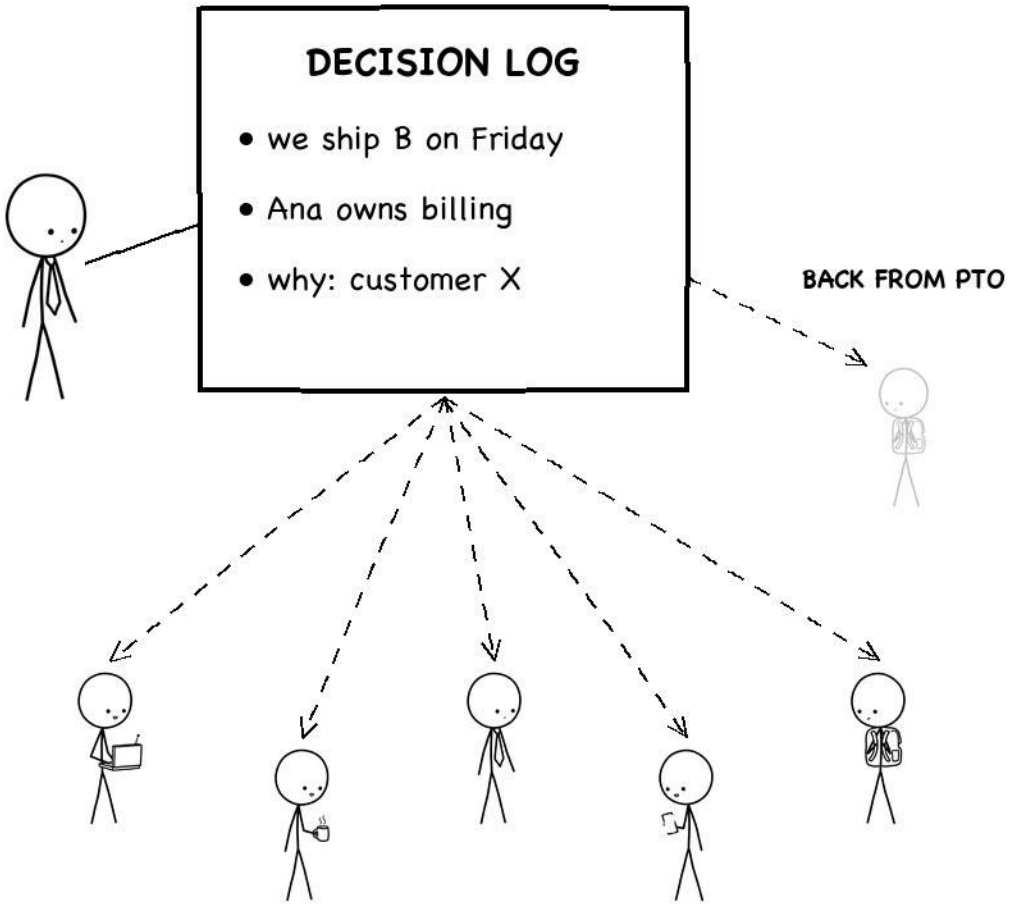

WRITE IT DOWN: BROADCAST, DON'T RPC

One write, many reads. Async. Still there when someone is on PTO.

TELLING EVERYONE, ONE BY ONE

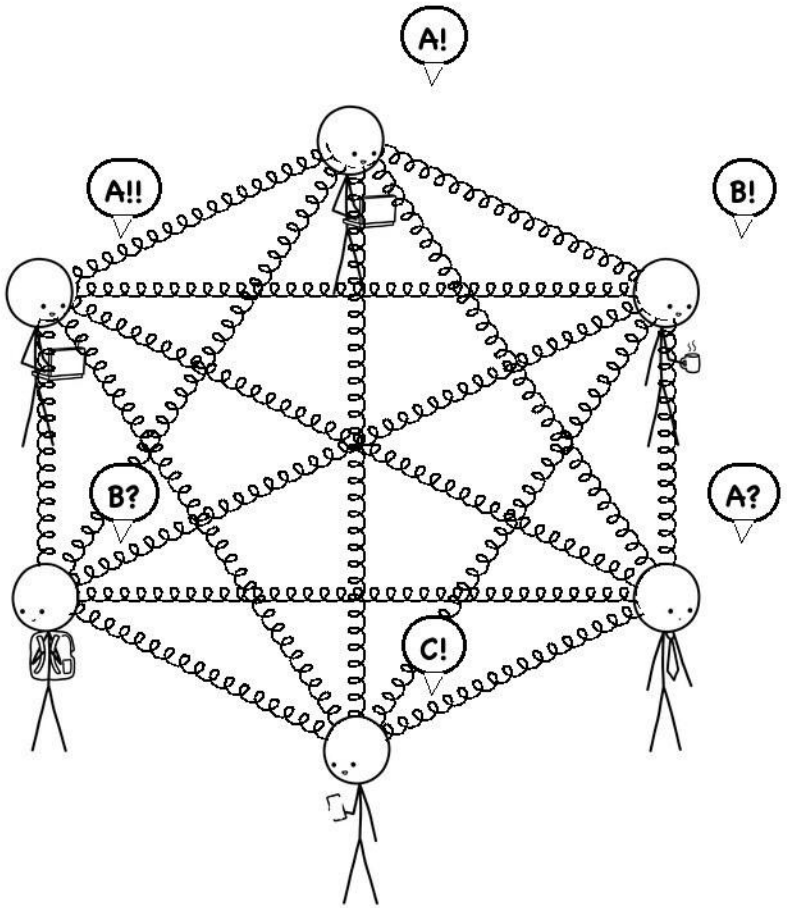

WRITE IT DOWN ONCE

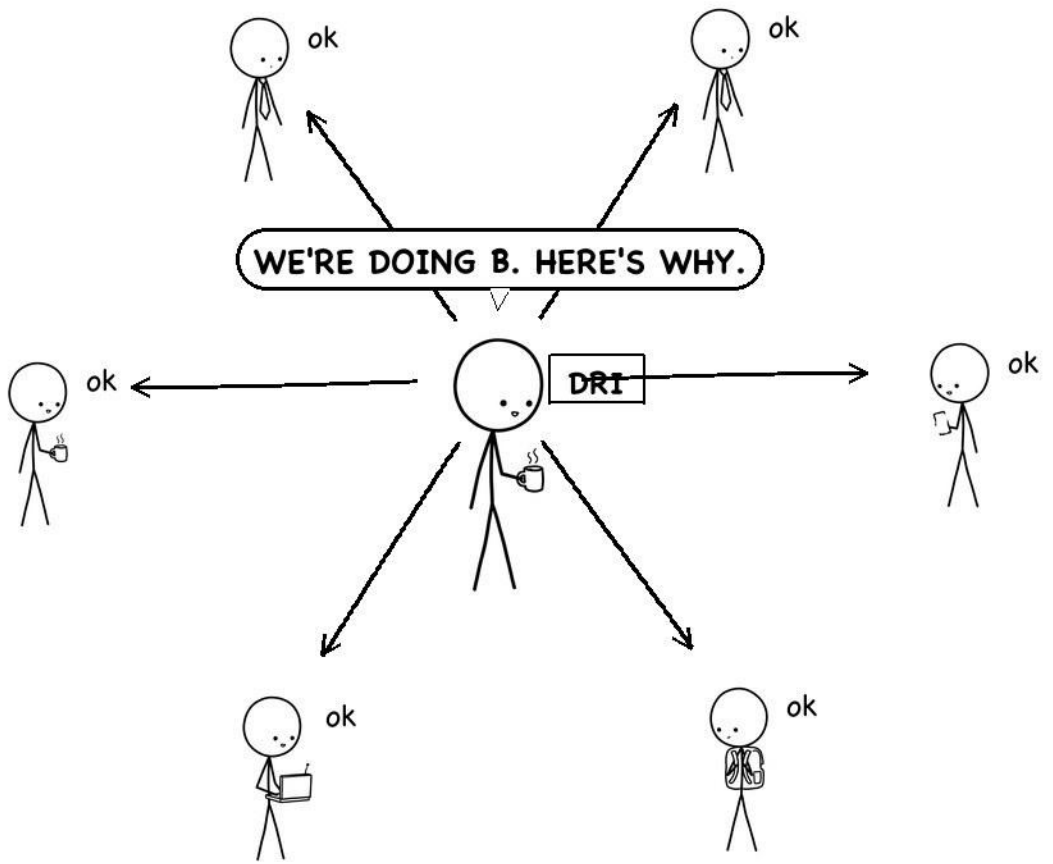

ONE OWNER PER DECISION

Consensus is expensive. Name a leader (the DRI); everyone else gets told.

EVERYONE DECIDES (FOREVER)

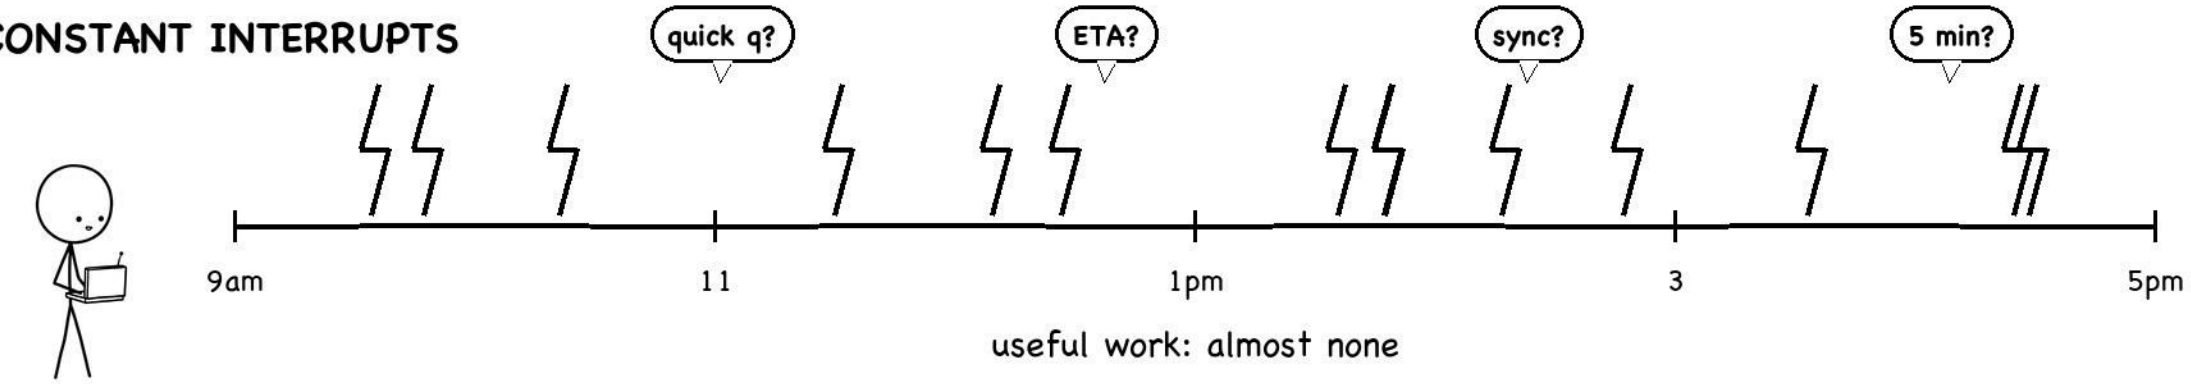

ONE DECIDES, EVERYONE HEARS WHY

HEARTBEATS & BATCHING

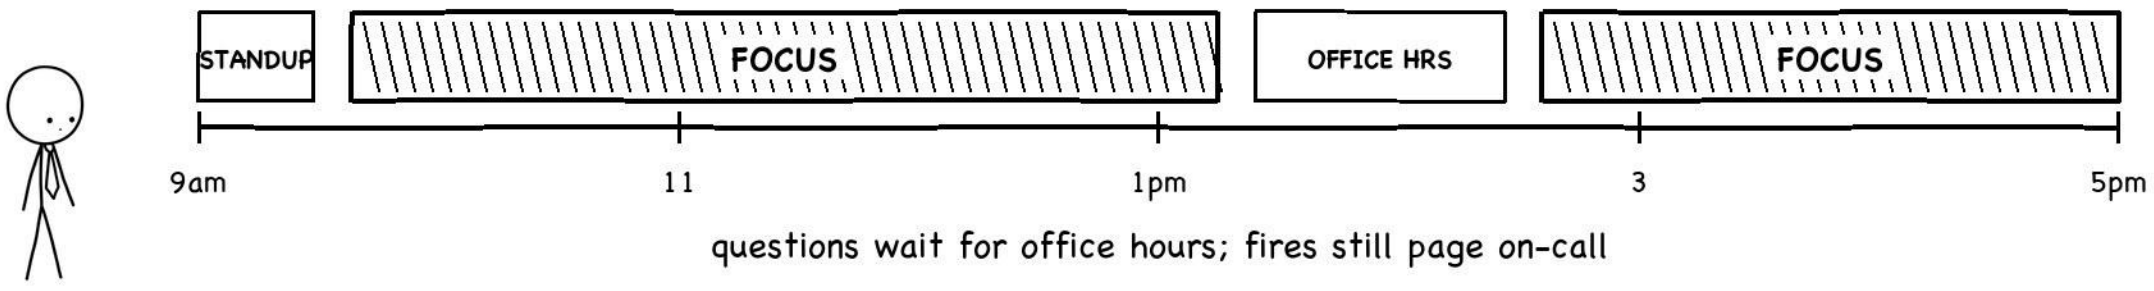

Predictable rituals beat constant interrupts.

CONSTANT INTERRUPTS

useful work: almost none

HEARTBEATS + BATCHING

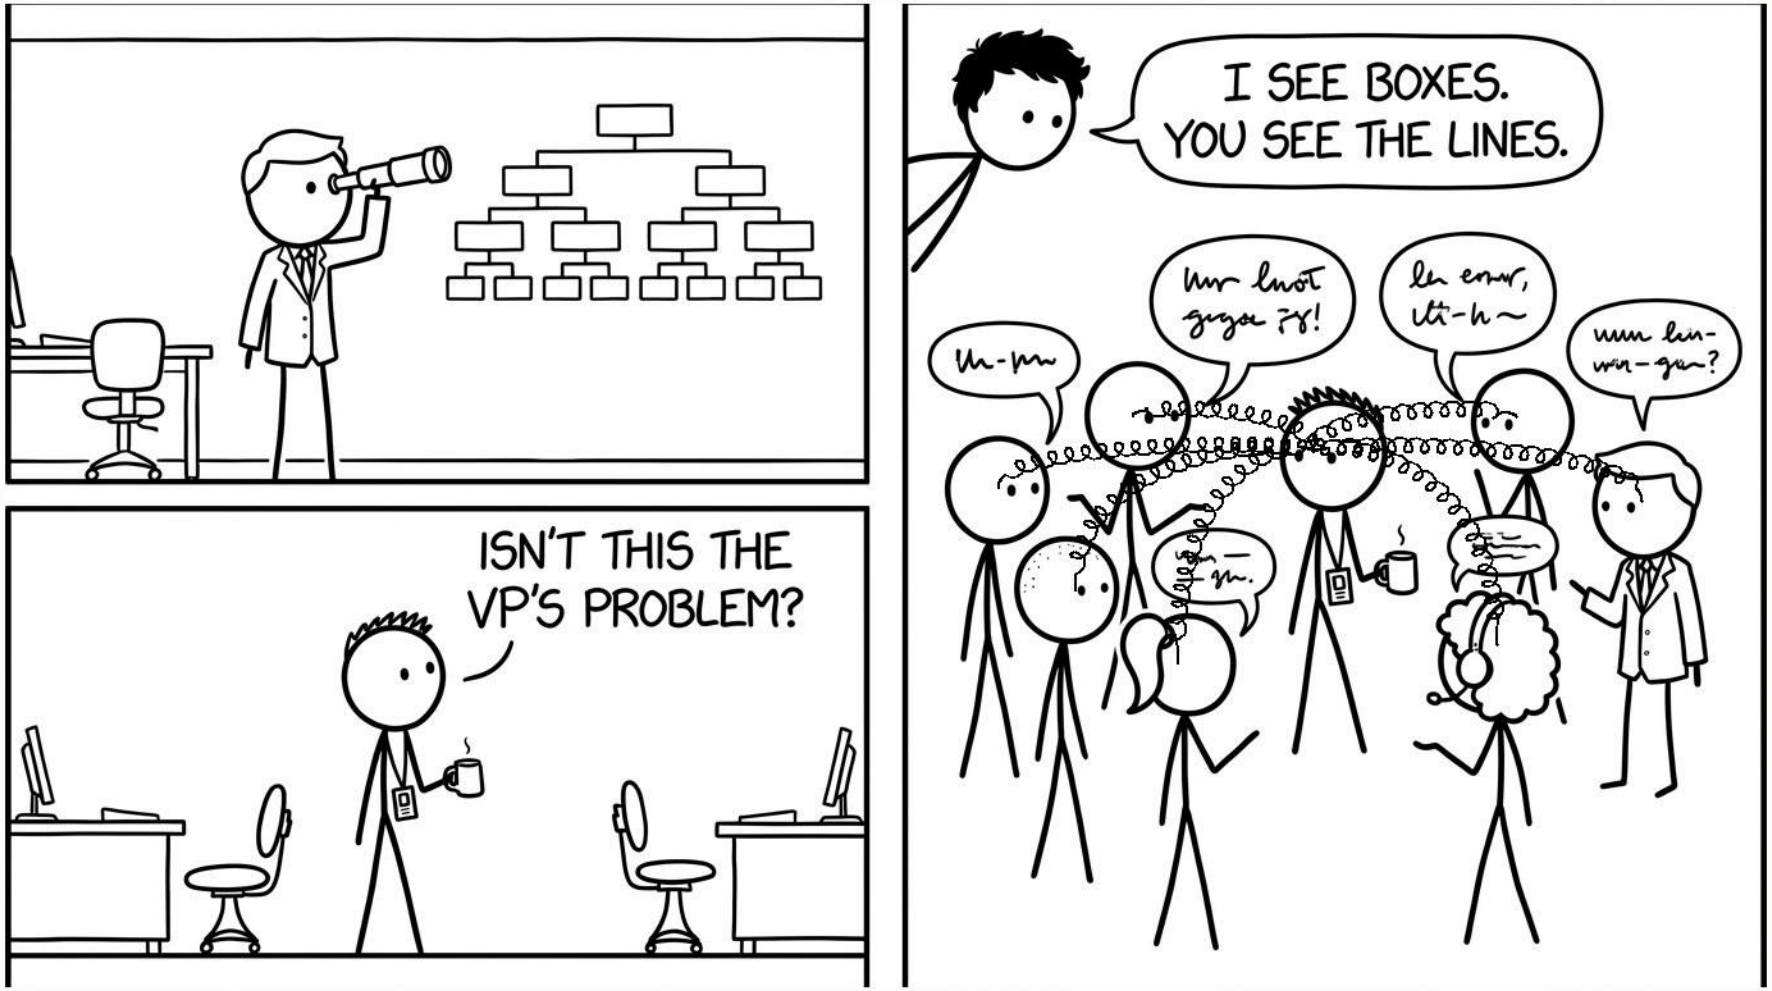

questions wait for office hours; fires still page on-call

PART 5

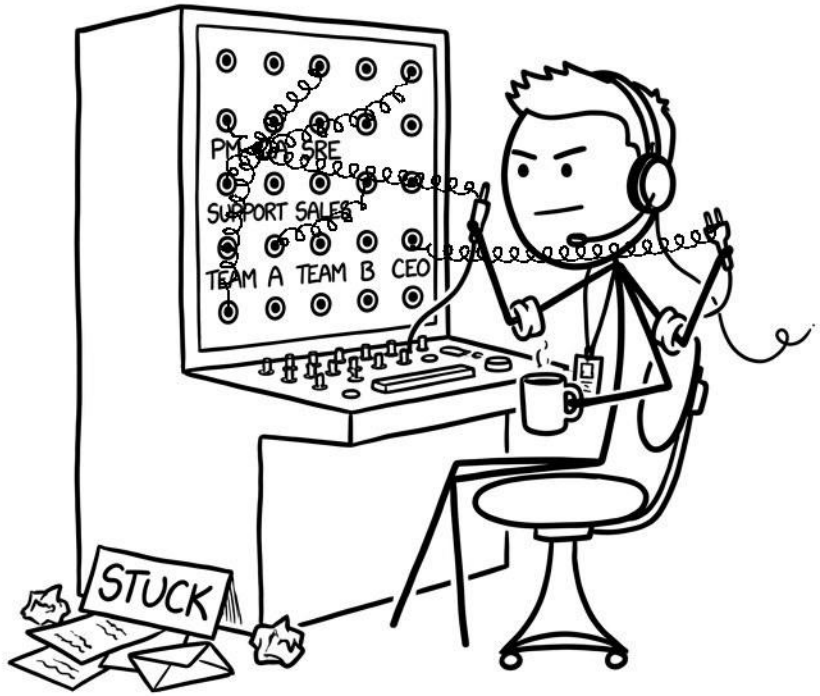

The EM's Responsibility

(Yes, you.)

ISN'T THIS THE VP'S PROBLEM?
I SEE BOXES. YOU SEE THE LINES.

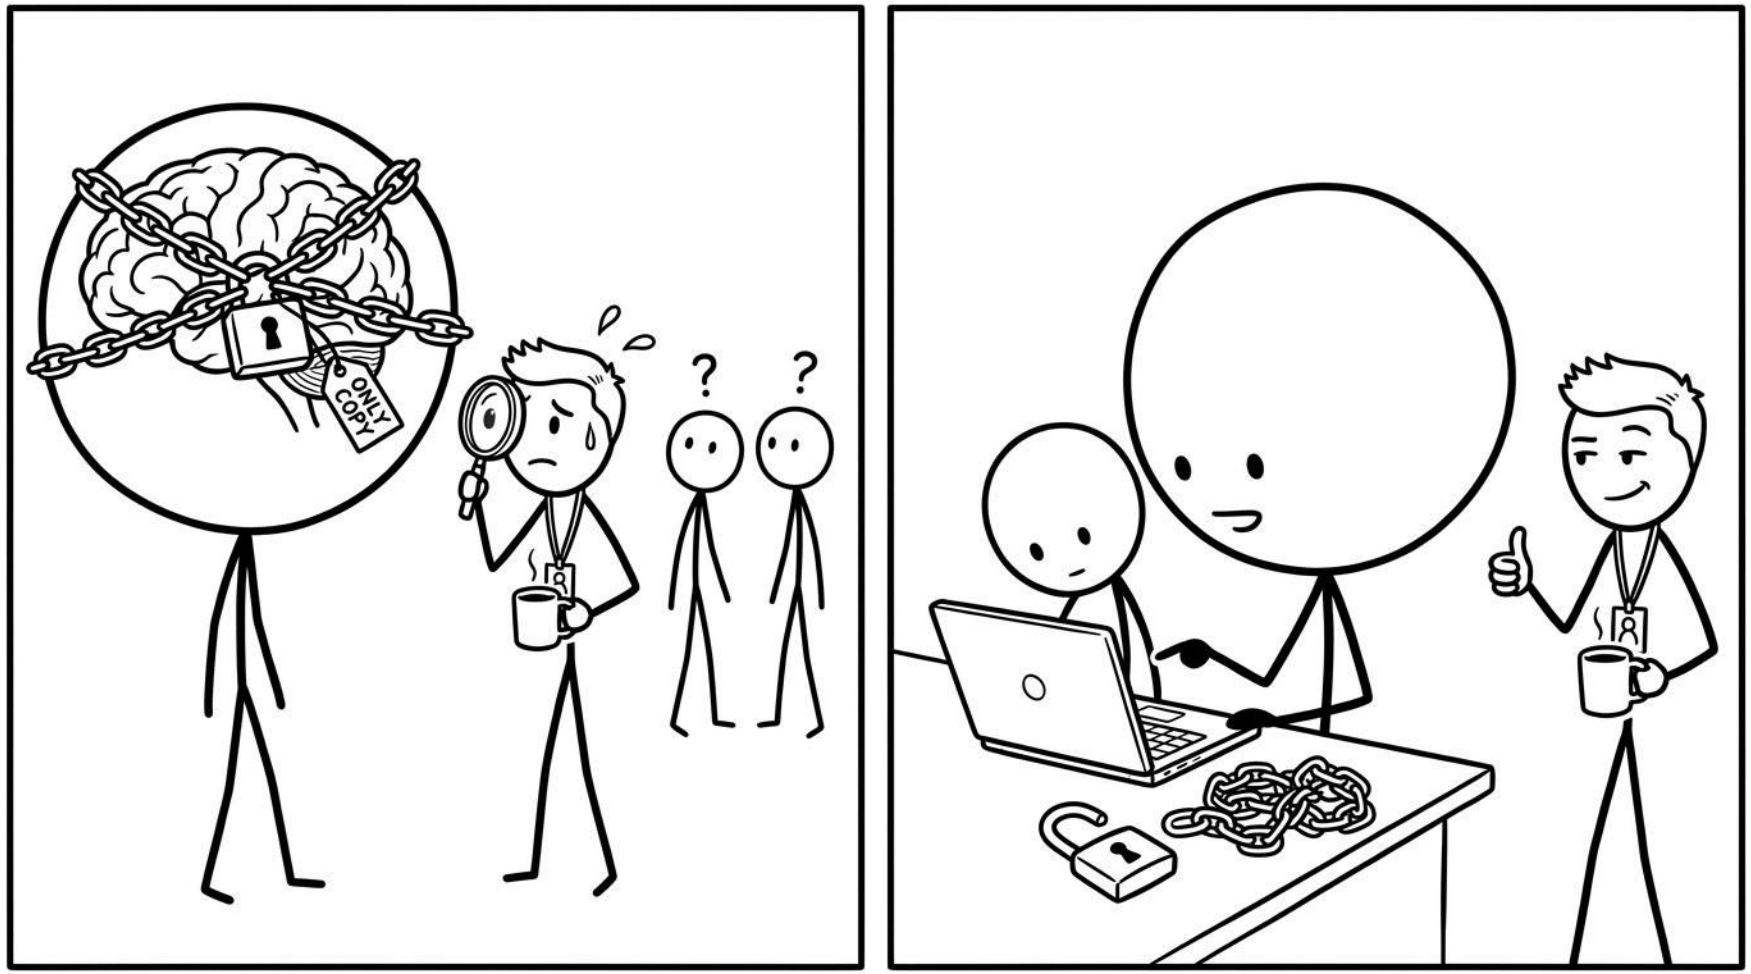

WHO needs to know WHAT, WHEN — and WHY?

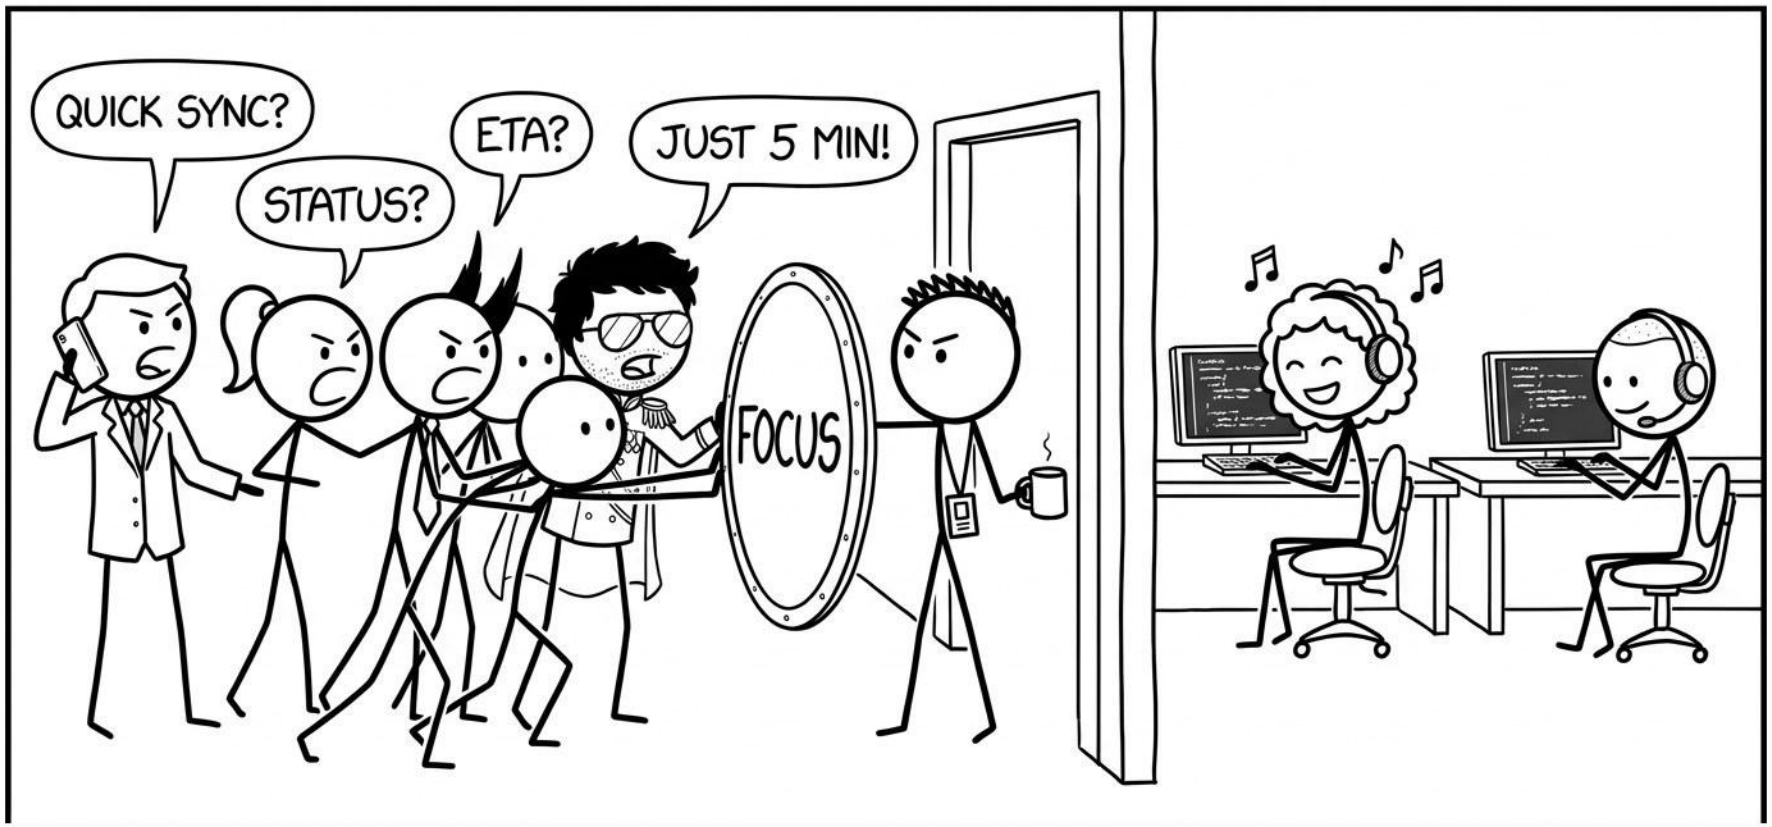

WHERE are they going to learn it?

Yes, you're just
a fancy router.

(Sorry.)

ONLY COPY

JUST 5 MIN!
FOCUS

PICK THE CONSISTENCY LEVEL

Not everything needs everyone to know right now.

STRONG

everyone, right now

- incidents
- priority changes
- who owns what

HOW:

say it live AND write it down

cost: $$$

EVENTUAL

the right people, this week

- roadmap changes
- decisions + why
- new hires, departures

HOW:

weekly notes, decision log

cost: $$

NEED-TO-KNOW

whoever touches it

- implementation details
- how the cache works
- edge cases

HOW:

in the code, PR and docs

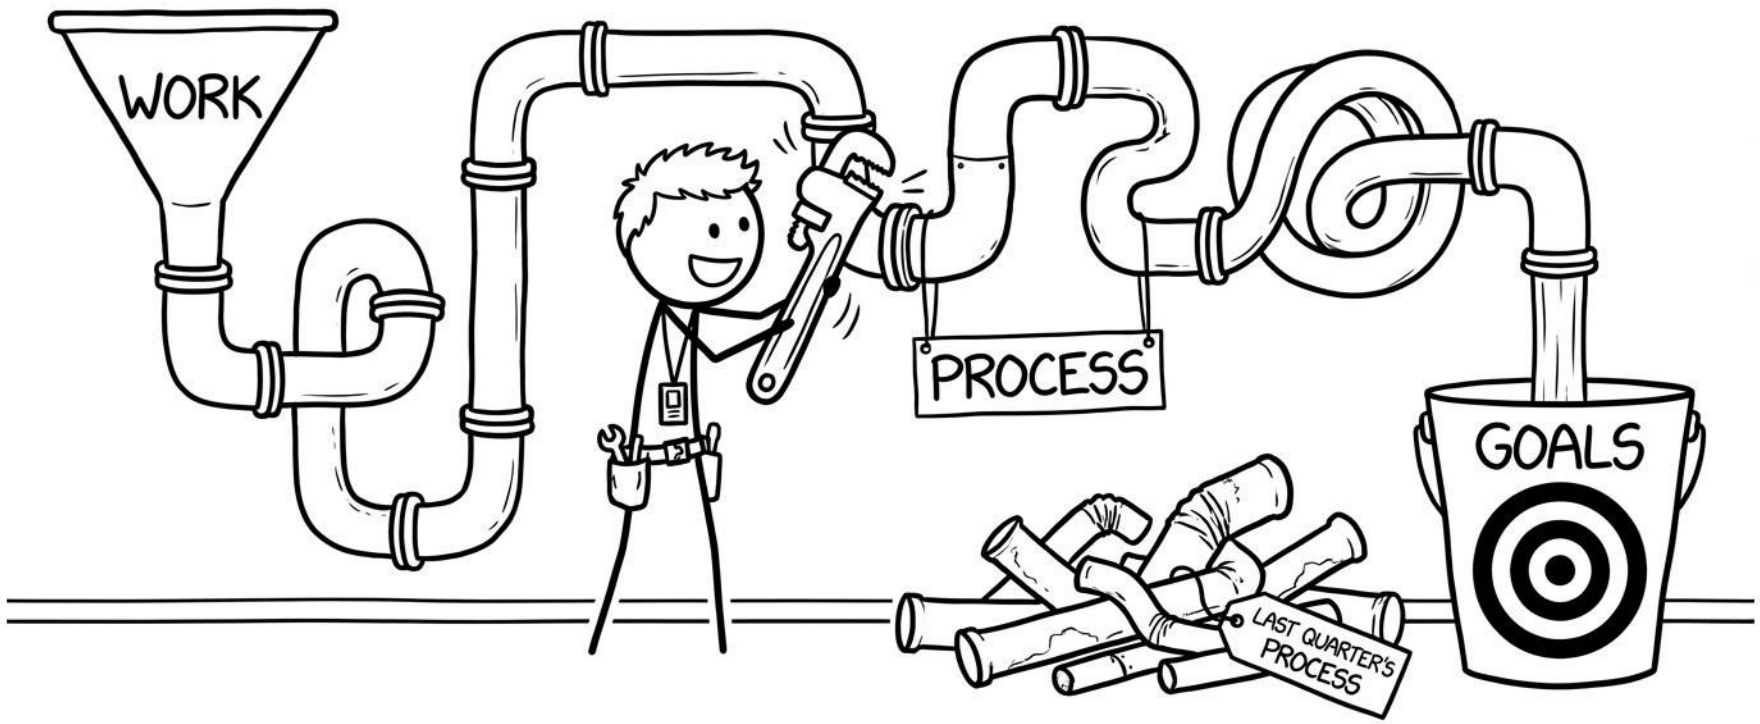

cost: $

...and that includes YOU. You don't need to know everything.

Don't burn all your cycles on info acquisition.

SHAPE PROCESS TO FIT GOALS

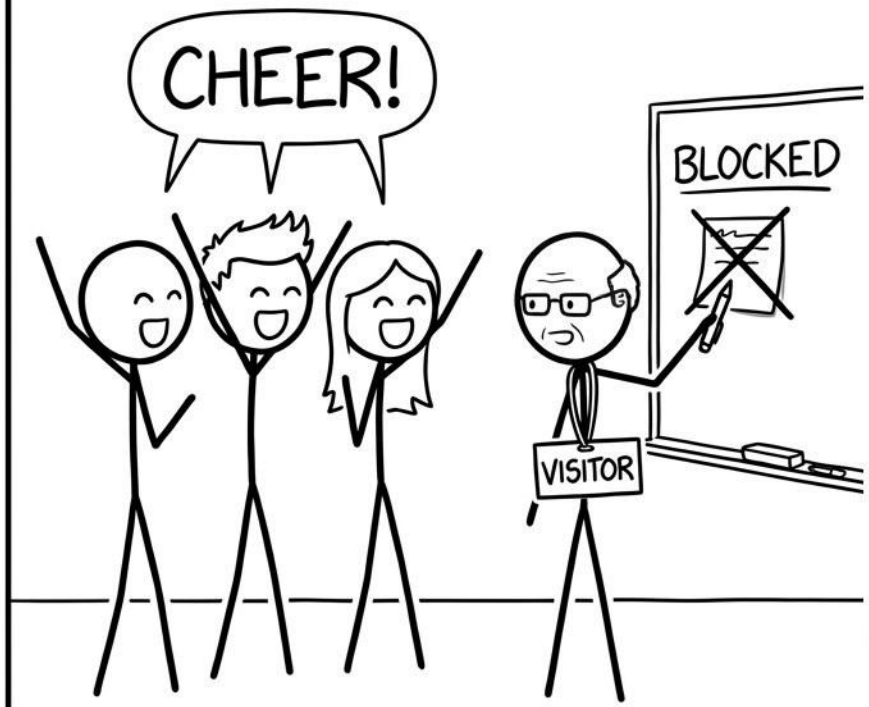

...and be comfortable changing it.

STANDUPS: SUPER HIGH BANDWIDTH, SUPER EXPENSIVE. USE JUDICIOUSLY.

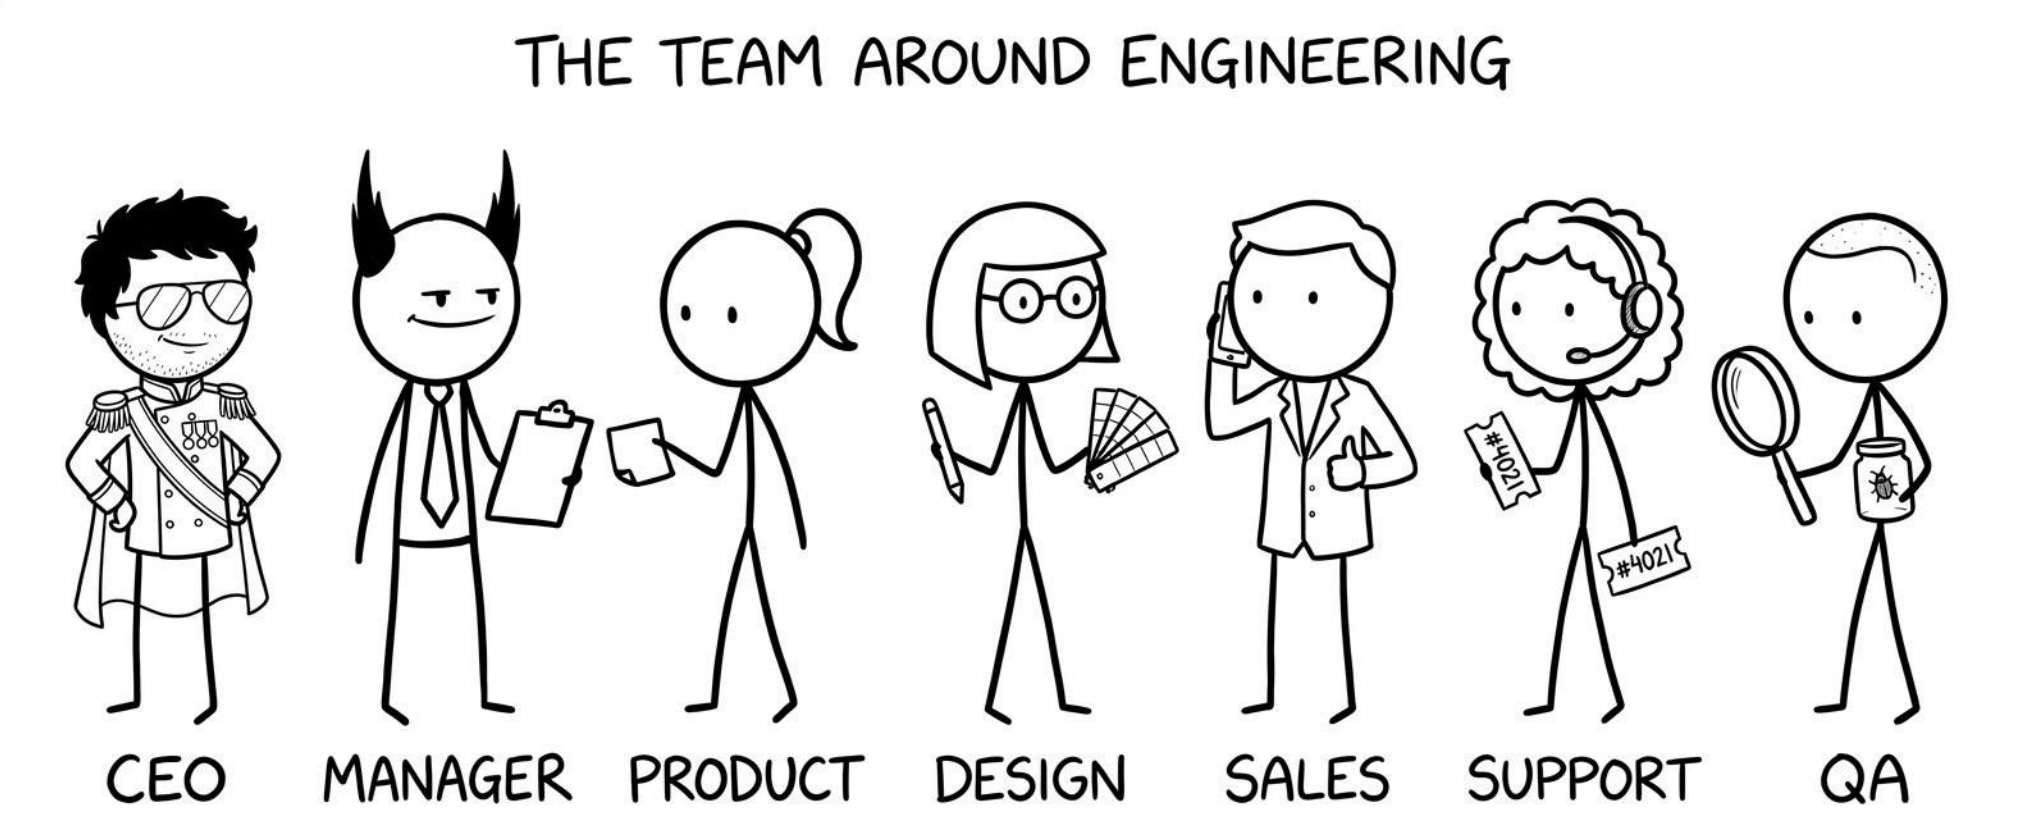

VIRTUAL TEAMS: BORROW (FOR A WHILE) WHOEVER UNBLOCKS YOU.

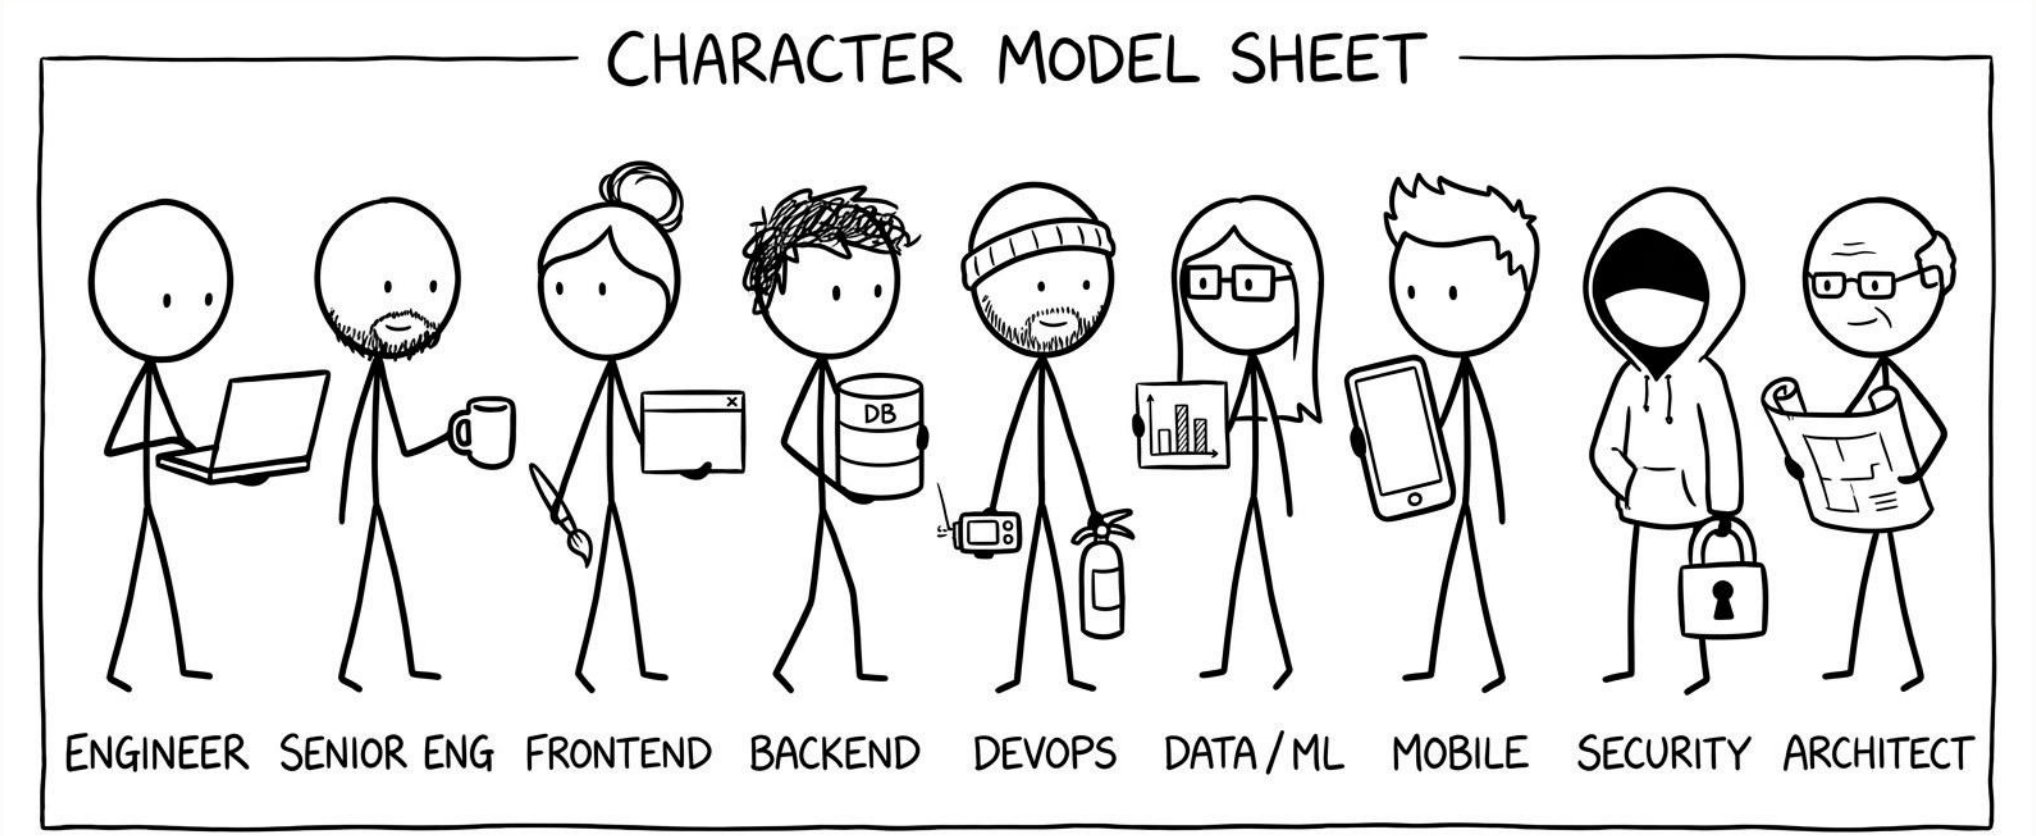

CUSTOMER WEEKLY · STORE HEALTH

Everyone who can affect a major goal. Weekly. No excuses for the BUSINESS not to be aligned.
